Jan. 2013 Arduino event at UWE.

2 17/9/2012: South-West Launch of CAS Network of Excellence

Introduction James Davenport introduced the event, and the main speaker, saying the following.

> Changing the teaching, and syllabus, of Computing in Schools has been likened to turning round a supertanker. This is not true: turning round a supertanker is an easy, if lengthy, process; the steersman puts the wheel down, and the supertaner turns, albeit slowly. What we have a process much more like turning round a Roman quinquereme: it's helpful if the steersman puts the wheel down, but the real work of turning the ship round comes from the hundreds (in our case thousands) of rowers: you.
