MA50174: Advanced Numerical Methods

Timetable for assignments 3 and 4: 2006

1. *Assignment 3:* **Set** Nov 8th, **Hand in** Dec 4th

2. *Assignment 4:* **Set** Nov 28th, **Hand in** Dec 15th

Each assignment and the benchmark test carry 20% of the total mark. The assignments are to be done in your own time. Note, that when doing the assignments it is the quality of the work which will give credit, not the quantity. As a guideline, the maximum length for each assignment should not be more than 10 sides. The assignment is meant to take about 15 hours. If it takes longer than this then you are reducing the amount of time that you can spend on other courses. To help you in allocating time to the assignment, some of the questions on the assignment are starred + to indicate that they are harder and can be ommited if you are running short of time (though this will lower your overall mark).
