

So you want to buy a supercomputer?

James Davenport
Hebron & Medlock Professor of Information Technology

University of Bath (U.K.)
(visiting Waterloo)

15 May 2009
Many thanks to Prof. Guest (Cardiff)

- Good (9th out of 117 in the U.K.: Guardian 12 May 2009)
- Heavily co-op
- Strengths in Science, Engineering, Mathematics

- Good (9th out of 117 in the U.K.: Guardian 12 May 2009)
- Heavily co-op
- Strengths in Science, Engineering, Mathematics

But small — 538 Faculty

U.K. scene — generalities

- Nationally run (EPSRC etc. \approx NSERC) major supercomputers

U.K. scene — generalities

- Nationally run (EPSRC etc. \approx NSERC) major supercomputers
- HECToR (current one) 29th in TOP 500

U.K. scene — generalities

- Nationally run (EPSRC etc. \approx NSERC) major supercomputers
- HECToR (current one) 29th in TOP 500
- Time bid for on competitive grants (virtual money)

U.K. scene — generalities

- Nationally run (EPSRC etc. \approx NSERC) major supercomputers
- HECToR (current one) 29th in TOP 500
- Time bid for on competitive grants (virtual money)
- Hence you need a 'track record'

U.K. scene — generalities

Basically, Mark 4 v 25:

U.K. scene — generalities

- Nationally run (EPSRC etc. \approx NSERC) major supercomputers
- HECToR (current one) 29th in TOP 500
- Time bid for on competitive grants (virtual money)
- Hence you need a 'track record'

Basically, Mark 4 v 25: “to him that hath shall be given”.

U.K. scene — recent developments

U.K. scene — recent developments

- EPSRC etc. (\approx NSERC) now allow depreciation on computing resources to be charged to grants
- (Previously, you had to *buy* your own machine

U.K. scene — recent developments

- EPSRC etc. (\approx NSERC) now allow depreciation on computing resources to be charged to grants
- (Previously, you had to *buy* your own machine and *run* it)

U.K. scene — recent developments

- EPSRC etc. (\approx NSERC) now allow depreciation on computing resources to be charged to grants
- (Previously, you had to *buy* your own machine and *run* it)
- Government announce Science Research Infrastructure Fund (£500M/year)
- (largely buildings, but equipment not excluded)

U.K. scene — recent developments

- EPSRC etc. (\approx NSERC) now allow depreciation on computing resources to be charged to grants
- (Previously, you had to *buy* your own machine and *run* it)
- Government announce Science Research Infrastructure Fund (£500M/year)
- (largely buildings, but equipment not excluded)
- Bath share about £5M/year

N.B. “year” = H.M. Treasury Year

U.K. scene — recent developments

- EPSRC etc. (\approx NSERC) now allow depreciation on computing resources to be charged to grants
- (Previously, you had to *buy* your own machine and *run* it)
- Government announce Science Research Infrastructure Fund (£500M/year)
- (largely buildings, but equipment not excluded)
- Bath share about £5M/year

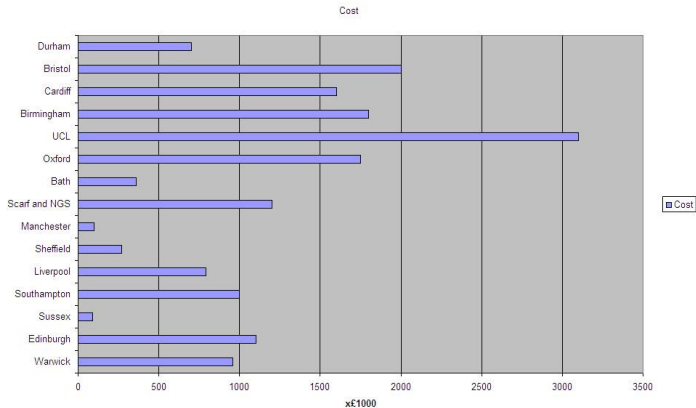

N.B. “year” = H.M. Treasury Year

Brainwave: if I purchase a supercomputer, then I can depreciate it, and have money to buy a new one.

Recent UK spend, excluding machine rooms etc.

Machine Rooms — a major problem

Cardiff £1.6M on machine, £1.4M on converting machine room and (high-quality) air conditioning.

Machine Rooms — a major problem

Cardiff £1.6M on machine, £1.4M on converting machine room and (high-quality) air conditioning.

Bristol £2M on machine, £2M+ on building machine room and including chilled water.

Machine Rooms — a major problem

- Cardiff** £1.6M on machine, £1.4M on converting machine room and (high-quality) air conditioning.
- Bristol** £2M on machine, £2M+ on building machine room and including chilled water.
- Imperial** (Central London) £3M on CO₂-cooled machine room.

Machine Rooms — a major problem

- Cardiff** £1.6M on machine, £1.4M on converting machine room and (high-quality) air conditioning.
- Bristol** £2M on machine, £2M+ on building machine room and including chilled water.
- Imperial** (Central London) £3M on CO₂-cooled machine room.

Machine Rooms — a major problem

Cardiff £1.6M on machine, £1.4M on converting machine room and (high-quality) air conditioning.

Bristol £2M on machine, £2M+ on building machine room and including chilled water.

Imperial (Central London) £3M on CO₂-cooled machine room.

Bath had an old machine room from the 1970s.

Old Machine Rooms — a mixed blessing

- + I doubt very much Bath would have spent those sort of sums on a new machine room

Old Machine Rooms — a mixed blessing

- + I doubt very much Bath would have spent those sort of sums on a new machine room
- + Comparative speed: I took under a year from initial decision to Phase 1 installed

Old Machine Rooms — a mixed blessing

- + I doubt very much Bath would have spent those sort of sums on a new machine room
- + Comparative speed: I took under a year from initial decision to Phase 1 installed
- It will, just about, cope with the current smallish machine: I think in a few years we'll *need* a new machine room

Old Machine Rooms — a mixed blessing

- + I doubt very much Bath would have spent those sort of sums on a new machine room
- + Comparative speed: I took under a year from initial decision to Phase 1 installed
- It will, just about, cope with the current smallish machine: I think in a few years we'll *need* a new machine room
- The University don't realise what a bargain they're getting

Old Machine Rooms — a mixed blessing

- + I doubt very much Bath would have spent those sort of sums on a new machine room
- + Comparative speed: I took under a year from initial decision to Phase 1 installed
- It will, just about, cope with the current smallish machine: I think in a few years we'll *need* a new machine room
- The University don't realise what a bargain they're getting
- Despite the Estates Department's promises, the power supply *did* need upgrading

Old Machine Rooms — a mixed blessing

- + I doubt very much Bath would have spent those sort of sums on a new machine room
- + Comparative speed: I took under a year from initial decision to Phase 1 installed
- It will, just about, cope with the current smallish machine: I think in a few years we'll *need* a new machine room
- The University don't realise what a bargain they're getting
- Despite the Estates Department's promises, the power supply *did* need upgrading
- + Contracts signed this week on a new machine room with chilled water!

Equipment Purchased

Equipment Purchased

Clustervision: a UK/Dutch firm of system integrators: the boards are Supermicro.

Equipment Purchased

Clustervision: a UK/Dutch firm of system integrators: the boards are Supermicro.

- 100 nodes; 2 × 4-core 2.8GHz Intel Harpertown

Equipment Purchased

Clustervision: a UK/Dutch firm of system integrators: the boards are Supermicro.

- 100 nodes; $2 \times$ 4-core 2.8GHz Intel Harpertown
- (3.0 gave less power/£; 2.66 pushed the power envelope)

Equipment Purchased

Clustervision: a UK/Dutch firm of system integrators: the boards are Supermicro.

- 100 nodes; $2 \times$ 4-core 2.8GHz Intel Harpertown
- (3.0 gave less power/£; 2.66 pushed the power envelope)
- 2 nodes/power supply

Equipment Purchased

Clustervision: a UK/Dutch firm of system integrators: the boards are Supermicro.

- 100 nodes; $2 \times$ 4-core 2.8GHz Intel Harpertown
- (3.0 gave less power/£; 2.66 pushed the power envelope)
- 2 nodes/power supply
- 2GB/core main memory

Equipment Purchased

Clustervision: a UK/Dutch firm of system integrators: the boards are Supermicro.

- 100 nodes; $2 \times$ 4-core 2.8GHz Intel Harpertown
- (3.0 gave less power/£; 2.66 pushed the power envelope)
- 2 nodes/power supply
- 2GB/core main memory
- * Specified this way as 2/4 core wasn't obvious

Equipment Purchased

Clustervision: a UK/Dutch firm of system integrators: the boards are Supermicro.

- 100 nodes; 2×4 -core 2.8GHz Intel Harpertown
 - (3.0 gave less power/£; 2.66 pushed the power envelope)
 - 2 nodes/power supply
 - 2GB/core main memory
 - * Specified this way as 2/4 core wasn't obvious
- = 1.6TB main memory — it adds up!

Equipment Purchased

Clustervision: a UK/Dutch firm of system integrators: the boards are Supermicro.

- 100 nodes; 2×4 -core 2.8GHz Intel Harpertown
 - (3.0 gave less power/£; 2.66 pushed the power envelope)
 - 2 nodes/power supply
 - 2GB/core main memory
 - * Specified this way as 2/4 core wasn't obvious
- ⇒ 1.6TB main memory — it adds up!
- Double Data Rate Infiniband

Acceptance Tests

- 1 Phase 1: Linpack benchmark

Acceptance Tests

- 1 Phase 1: Linpack benchmark
 - We had linear algebra compiled for the previous chip!

Acceptance Tests

- ① Phase 1: Linpack benchmark
 - We had linear algebra compiled for the previous chip!
- ② Phase 2: a range of tests related to major users

Acceptance Tests

- ① Phase 1: Linpack benchmark
 - We had linear algebra compiled for the previous chip!
- ② Phase 2: a range of tests related to major users
 - * Very grateful to Prof. Guest for organising

Acceptance Tests

- ① Phase 1: Linpack benchmark
 - We had linear algebra compiled for the previous chip!
- ② Phase 2: a range of tests related to major users
 - * Very grateful to Prof. Guest for organising
 - MPI defaults were badly wrong

Acceptance Tests

- ① Phase 1: Linpack benchmark
 - We had linear algebra compiled for the previous chip!
- ② Phase 2: a range of tests related to major users
 - * Very grateful to Prof. Guest for organising
 - MPI defaults were badly wrong
 - DDR Infiniband was running out of steam faster than expected

Acceptance Tests

- ① Phase 1: Linpack benchmark
 - We had linear algebra compiled for the previous chip!
- ② Phase 2: a range of tests related to major users
 - * Very grateful to Prof. Guest for organising
 - MPI defaults were badly wrong
 - DDR Infiniband was running out of steam faster than expected
 - Several partial failures.

Partial Failures

Partial Failures

Very frustrating and hard to diagnose: typically one job would take “longer than expected” .

Partial Failures

Very frustrating and hard to diagnose: typically one job would take “longer than expected” .

- Observe this is happening, and feel very confused

Partial Failures

Very frustrating and hard to diagnose: typically one job would take “longer than expected” .

- Observe this is happening, and feel very confused
- Eventually spot that it happens when node 78 is used!

Partial Failures

Very frustrating and hard to diagnose: typically one job would take “longer than expected” .

- Observe this is happening, and feel very confused
- Eventually spot that it happens when node 78 is used!
- Convince the manufacturer to run their tests on node 78

Partial Failures

Very frustrating and hard to diagnose: typically one job would take “longer than expected” .

- Observe this is happening, and feel very confused
- Eventually spot that it happens when node 78 is used!
- Convince the manufacturer to run their tests on node 78
