

Chapter 10.2.3
Evergreening

Extending new loans

Extending new loans

- ▶ Companies may have loans outstanding they **cannot repay** with the resources available

Extending new loans

- ▶ Companies may have loans outstanding they cannot repay with the resources available
- ▶ This makes them subject to **liquidation** if the bank insists on loan repayment

Extending new loans

- ▶ Companies may have loans outstanding they cannot repay with the resources available
- ▶ This makes them subject to liquidation if the bank insists on loan repayment, causing the bank **losses**

Extending new loans

- ▶ Companies may have loans outstanding they cannot repay with the resources available
- ▶ This makes them subject to liquidation if the bank insists on loan repayment, causing the bank losses
- ▶ Banks might **extend a new loan** for companies to generate additional profits

Extending new loans

- ▶ Companies may have loans outstanding they cannot repay with the resources available
- ▶ This makes them subject to liquidation if the bank insists on loan repayment, causing the bank losses
- ▶ Banks might extend a new loan for companies to generate additional profits, which will be put towards the **repayment of the outstanding loan**

Extending new loans

- ▶ Companies may have loans outstanding they cannot repay with the resources available
- ▶ This makes them subject to liquidation if the bank insists on loan repayment, causing the bank losses
- ▶ Banks might extend a new loan for companies to generate additional profits, which will be put towards the repayment of the outstanding loan, **reducing** bank losses

Extending new loans

- ▶ Companies may have loans outstanding they cannot repay with the resources available
- ▶ This makes them subject to liquidation if the bank insists on loan repayment, causing the bank losses
- ▶ Banks might extend a new loan for companies to generate additional profits, which will be put towards the repayment of the outstanding loan, reducing bank losses
- ▶ Extending such loans is referred to as **evergreening**

Extending new loans

- ▶ Companies may have loans outstanding they cannot repay with the resources available
- ▶ This makes them subject to liquidation if the bank insists on loan repayment, causing the bank losses
- ▶ Banks might extend a new loan for companies to generate additional profits, which will be put towards the repayment of the outstanding loan, reducing bank losses
- ▶ Extending such loans is referred to as evergreening

Company profits

Company profits

- ▶ A company has a loan outstanding which it **cannot repay**

Company profits

- ▶ A company has a loan outstanding which it cannot repay
- ▶ The bank provides a **new loan**
- ▶ $\Pi_C = \left(\quad L \quad \right)$

Company profits

- ▶ A company has a loan outstanding which it cannot repay
- ▶ The bank provides a **new loan**, which the company **invests**
- ▶ $\Pi_C = \pi \left((1 + R)L \right)$

Company profits

- ▶ A company has a loan outstanding which it cannot repay
- ▶ The bank provides a **new loan**, which the company **invests** and uses these proceeds to **repay both loans**
- ▶ $\Pi_C = \pi \left((1 + R)L - (1 + r_L) (L + \hat{L}) \right)$

Company profits

- ▶ A company has a loan outstanding which it cannot repay
- ▶ The bank provides a new loan, which the company invests and uses these proceeds to repay both loans
- ▶ $\Pi_C = \pi \left((1 + R)L - (1 + r_L) (L + \hat{L}) \right)$
- ▶ Companies accept loans if $\Pi_C \geq 0$

Company profits

- ▶ A company has a loan outstanding which it cannot repay
 - ▶ The bank provides a new loan, which the company invests and uses these proceeds to repay both loans
 - ▶ $\Pi_C = \pi \left((1 + R)L - (1 + r_L) (L + \hat{L}) \right)$
 - ▶ Companies accept loans if $\Pi_C \geq 0$
- $\Rightarrow 1 + r_L \leq 1 + r_L^* = (1 + R) \frac{L}{L + \hat{L}}$

Company profits

- ▶ A company has a loan outstanding which it cannot repay
 - ▶ The bank provides a new loan, which the company invests and uses these proceeds to repay both loans
 - ▶ $\Pi_C = \pi \left((1 + R)L - (1 + r_L) (L + \hat{L}) \right)$
 - ▶ Companies accept loans if $\Pi_C \geq 0$
- $\Rightarrow 1 + r_L \leq 1 + r_L^* = (1 + R) \frac{L}{L + \hat{L}}$

Loan rate if both loans are repaid

Loan rate if both loans are repaid

- ▶ Assume the revenue of the investment is **large enough** to repay the both loans

Loan rate if both loans are repaid

- ▶ Assume the revenue of the investment is large enough to repay the both loans
- ▶ $\Pi_B = \pi (1 + r_L) (L + \hat{L}) - (1 + r_D) (L + \hat{L})$

Loan rate if both loans are repaid

- ▶ Assume the revenue of the investment is large enough to repay the both loans
- ▶ $\Pi_B = \pi (1 + r_L) (L + \hat{L}) - (1 + r_D) (L + \hat{L})$
- ▶ Banks grant the new loan if they are better off than losing the outstanding loan:
 $\Pi_B \geq -\hat{L}$

Loan rate if both loans are repaid

- ▶ Assume the revenue of the investment is large enough to repay the both loans
 - ▶ $\Pi_B = \pi (1 + r_L) (L + \hat{L}) - (1 + r_D) (L + \hat{L})$
 - ▶ Banks grant the new loan if they are better off than losing the outstanding loan:
 $\Pi_B \geq -\hat{L}$
- $\Rightarrow 1 + r_L \geq 1 + r_L^{**} = \frac{(1+r_D)(L+\hat{L})-\hat{L}}{\pi(L+\hat{L})}$

Loan rate if both loans are repaid

- ▶ Assume the revenue of the investment is large enough to repay the both loans
 - ▶ $\Pi_B = \pi (1 + r_L) (L + \hat{L}) - (1 + r_D) (L + \hat{L})$
 - ▶ Banks grant the new loan if they are better off than losing the outstanding loan:
 $\Pi_B \geq -\hat{L}$
- $\Rightarrow 1 + r_L \geq 1 + r_L^{**} = \frac{(1+r_D)(L+\hat{L})-\hat{L}}{\pi(L+\hat{L})}$
- ▶ A loan is agreed if $1 + r_L^* \geq 1 + r_L^{**}$

Loan rate if both loans are repaid

- ▶ Assume the revenue of the investment is large enough to repay the both loans
- ▶ $\Pi_B = \pi (1 + r_L) (L + \hat{L}) - (1 + r_D) (L + \hat{L})$
- ▶ Banks grant the new loan if they are better off than losing the outstanding loan:

$$\Pi_B \geq -\hat{L}$$

$$\Rightarrow 1 + r_L \geq 1 + r_L^{**} = \frac{(1+r_D)(L+\hat{L})-\hat{L}}{\pi(L+\hat{L})}$$

- ▶ A loan is agreed if $1 + r_L^* \geq 1 + r_L^{**}$

$$\Rightarrow \hat{L} \leq \hat{L}^* = \frac{\pi(1+R)-(1+r_D)}{r_D} L$$

Loan rate if both loans are repaid

- ▶ Assume the revenue of the investment is large enough to repay the both loans
- ▶ $\Pi_B = \pi (1 + r_L) (L + \hat{L}) - (1 + r_D) (L + \hat{L})$
- ▶ Banks grant the new loan if they are better off than losing the outstanding loan:

$$\Pi_B \geq -\hat{L}$$

$$\Rightarrow 1 + r_L \geq 1 + r_L^{**} = \frac{(1+r_D)(L+\hat{L})-\hat{L}}{\pi(L+\hat{L})}$$

- ▶ A loan is agreed if $1 + r_L^* \geq 1 + r_L^{**}$

$$\Rightarrow \hat{L} \leq \hat{L}^* = \frac{\pi(1+R)-(1+r_D)}{r_D} L$$

Loan rate if both loans cannot be repaid

Loan rate if both loans cannot be repaid

- ▶ If the revenue is **not enough** to repay both loans, the bank will seize **all revenue**
- ▶ $\Pi_B = \pi (1 + R) L - (1 + r_D) (L + \hat{L})$

Loan rate if both loans cannot be repaid

- ▶ If the revenue is not enough to repay both loans, the bank will seize all revenue
- ▶ $\Pi_B = \pi (1 + R) L - (1 + r_D) (L + \hat{L})$
- ▶ Banks grant the new loan if they are better off than losing the outstanding loan:
 $\Pi_B \geq -\hat{L}$

Loan rate if both loans cannot be repaid

- ▶ If the revenue is not enough to repay both loans, the bank will seize all revenue
 - ▶ $\Pi_B = \pi (1 + R) L - (1 + r_D) (L + \hat{L})$
 - ▶ Banks grant the new loan if they are better off than losing the outstanding loan:
 $\Pi_B \geq -\hat{L}$
- $\Rightarrow \hat{L} \leq \hat{L}^* = \frac{\pi(1+R)-(1+r_D)}{r_D} L$

Loan rate if both loans cannot be repaid

- ▶ If the revenue is not enough to repay both loans, the bank will seize all revenue
 - ▶ $\Pi_B = \pi (1 + R) L - (1 + r_D) (L + \hat{L})$
 - ▶ Banks grant the new loan if they are better off than losing the outstanding loan:
 $\Pi_B \geq -\hat{L}$
- $\Rightarrow \hat{L} \leq \hat{L}^* = \frac{\pi(1+R)-(1+r_D)}{r_D} L$
- ▶ A new loan is agreed if $\hat{L} \leq \hat{L}^*$

Loan rate if both loans cannot be repaid

- ▶ If the revenue is not enough to repay both loans, the bank will seize all revenue
 - ▶ $\Pi_B = \pi (1 + R) L - (1 + r_D) (L + \hat{L})$
 - ▶ Banks grant the new loan if they are better off than losing the outstanding loan:
 $\Pi_B \geq -\hat{L}$
- $\Rightarrow \hat{L} \leq \hat{L}^* = \frac{\pi(1+R)-(1+r_D)}{r_D} L$
- ▶ A new loan is agreed if $\hat{L} \leq \hat{L}^*$

Loan from another bank

Loan from another bank

- ▶ A new bank would **not be concerned** about the outstanding loan

Loan from another bank

- ▶ A new bank would not be concerned about the outstanding loan, but only the **new loan** granted

Loan from another bank

- ▶ A new bank would not be concerned about the outstanding loan, but only the new loan granted
- ▶ Assume all loans can be repaid fully: $(1 + R) L \geq (1 + r_L) L + \hat{L}$

Loan from another bank

- ▶ A new bank would not be concerned about the outstanding loan, but only the new loan granted
 - ▶ Assume all loans can be repaid fully: $(1 + R) L \geq (1 + r_L) L + \hat{L}$
- $\Rightarrow \hat{\Pi}_B = \pi (1 + r_L) L - (1 + r_D) L$

Loan from another bank

- ▶ A new bank would not be concerned about the outstanding loan, but only the new loan granted
 - ▶ Assume all loans can be repaid fully: $(1 + R) L \geq (1 + r_L) L + \hat{L}$
- $\Rightarrow \hat{\Pi}_B = \pi (1 + r_L) L - (1 + r_D) L$
- ▶ Banks grant the new loan if this is profitable: $\hat{\Pi}_B \geq 0$

Loan from another bank

- ▶ A new bank would not be concerned about the outstanding loan, but only the new loan granted
- ▶ Assume all loans can be repaid fully: $(1 + R) L \geq (1 + r_L) L + \hat{L}$
- ⇒ $\hat{\Pi}_B = \pi (1 + r_L) L - (1 + r_D) L$
- ▶ Banks grant the new loan if this is profitable: $\hat{\Pi}_B \geq 0$
- ⇒ $1 + r_L \geq 1 + \hat{r}_L^* = \frac{1+r_D}{\pi}$

Loan from another bank

- ▶ A new bank would not be concerned about the outstanding loan, but only the new loan granted
- ▶ Assume all loans can be repaid fully: $(1 + R) L \geq (1 + r_L) L + \hat{L}$
- ⇒ $\hat{\Pi}_B = \pi (1 + r_L) L - (1 + r_D) L$
- ▶ Banks grant the new loan if this is profitable: $\hat{\Pi}_B \geq 0$
- ⇒ $1 + r_L \geq 1 + \hat{r}_L^* = \frac{1+r_D}{\pi}$
- ▶ A loan is agreed if $1 + r_L^* \geq 1 + \hat{r}_L^*$

Loan from another bank

- ▶ A new bank would not be concerned about the outstanding loan, but only the new loan granted
- ▶ Assume all loans can be repaid fully: $(1 + R) L \geq (1 + r_L) L + \hat{L}$
- ⇒ $\hat{\Pi}_B = \pi (1 + r_L) L - (1 + r_D) L$
- ▶ Banks grant the new loan if this is profitable: $\hat{\Pi}_B \geq 0$
- ⇒ $1 + r_L \geq 1 + \hat{r}_L^* = \frac{1+r_D}{\pi}$
- ▶ A loan is agreed if $1 + r_L^* \geq 1 + \hat{r}_L^*$
- ⇒ $\hat{L} \leq \hat{L}^{**} = \frac{\pi(1+R)-(1+r_D)}{1+r_D} L$

Loan from another bank

▶ A new bank would not be concerned about the outstanding loan, but only the new loan granted

▶ Assume all loans can be repaid fully: $(1 + R) L \geq (1 + r_L) L + \hat{L}$

$$\Rightarrow \hat{\Pi}_B = \pi (1 + r_L) L - (1 + r_D) L$$

▶ Banks grant the new loan if this is profitable: $\hat{\Pi}_B \geq 0$

$$\Rightarrow 1 + r_L \geq 1 + \hat{r}_L^* = \frac{1+r_D}{\pi}$$

▶ A loan is agreed if $1 + r_L^* \geq 1 + \hat{r}_L^*$

$$\Rightarrow \hat{L} \leq \hat{L}^{**} = \frac{\pi(1+R)-(1+r_D)}{1+r_D} L$$

Loan limits

- ▶ If both loans cannot be repaid fully, the new bank obtains the **revenue of the company pro-rata**
- ▶ $\hat{\Pi}_B = \pi (1 + R) \frac{L}{L + \hat{L}} L - (1 + r_D) L$

- ▶ If both loans cannot be repaid fully, the new bank obtains the revenue of the company pro-rata
- ▶ $\hat{\Pi}_B = \pi (1 + R) \frac{L}{L + \hat{L}} L - (1 + r_D) L$
- ▶ Banks grant the new loan if this is profitable: $\hat{\Pi}_B \geq 0$

- ▶ If both loans cannot be repaid fully, the new bank obtains the revenue of the company pro-rata
 - ▶ $\hat{\Pi}_B = \pi (1 + R) \frac{L}{L + \hat{L}} L - (1 + r_D) L$
 - ▶ Banks grant the new loan if this is profitable: $\hat{\Pi}_B \geq 0$
- $\Rightarrow \hat{L} \leq \hat{L}^{**} = \frac{\pi(1+R)-(1+r_D)}{1+r_D} L$

- ▶ If both loans cannot be repaid fully, the new bank obtains the revenue of the company pro-rata
 - ▶ $\hat{\Pi}_B = \pi (1 + R) \frac{L}{L + \hat{L}} L - (1 + r_D) L$
 - ▶ Banks grant the new loan if this is profitable: $\hat{\Pi}_B \geq 0$
- $\Rightarrow \hat{L} \leq \hat{L}^{**} = \frac{\pi(1+R)-(1+r_D)}{1+r_D} L$

Lending decisions

Lending decisions

- ▶ $\hat{L} \leq \hat{L}^{**}$: Other banks would provide a loan the company is **creditworthy**

Lending decisions

- ▶ $\hat{L} \leq \hat{L}^{**}$: Other banks would provide a loan the company is creditworthy
- ▶ $\hat{L}^{**} < \hat{L} \leq \hat{L}^*$: Only the existing bank provides a loan, **evergreening**

Lending decisions

- ▶ $\hat{L} \leq \hat{L}^{**}$: Other banks would provide a loan the company is creditworthy
- ▶ $\hat{L}^{**} < \hat{L} \leq \hat{L}^*$: Only the existing bank provides a loan, evergreening
- ▶ $\hat{L} > \hat{L}^*$: **No new loan** is granted

Lending decisions

- ▶ $\hat{L} \leq \hat{L}^{**}$: Other banks would provide a loan the company is creditworthy
- ▶ $\hat{L}^{**} < \hat{L} \leq \hat{L}^*$: Only the existing bank provides a loan, evergreening
- ▶ $\hat{L} > \hat{L}^*$: No new loan is granted
- ▶ To entice companies taking the evergreening loan, existing banks offer **better conditions** than other banks would

Lending decisions

- ▶ $\hat{L} \leq \hat{L}^{**}$: Other banks would provide a loan the company is creditworthy
- ▶ $\hat{L}^{**} < \hat{L} \leq \hat{L}^*$: Only the existing bank provides a loan, evergreening
- ▶ $\hat{L} > \hat{L}^*$: No new loan is granted
- ▶ To entice companies taking the evergreening loan, existing banks offer better conditions than other banks would

Summary

Summary

- ▶ If the outstanding loan is **not too large**, an existing bank will **extend** a new loan

Summary

- ▶ If the outstanding loan is not too large, an existing bank will extend a new loan to **recover** some of the loan amount

Summary

- ▶ If the outstanding loan is not too large, an existing bank will extend a new loan to recover some of the loan amount
- ▶ Banks provide a loan to a company that is **not creditworthy**

Summary

- ▶ If the outstanding loan is not too large, an existing bank will extend a new loan to recover some of the loan amount
- ▶ Banks provide a loan to a company that is not creditworthy to **reduce their losses** on the outstanding loan

Summary

- ▶ If the outstanding loan is not too large, an existing bank will extend a new loan to recover some of the loan amount
- ▶ Banks provide a loan to a company that is not creditworthy to reduce their losses on the outstanding loan
- ▶ This can **delay** the failure of a company

Summary

- ▶ If the outstanding loan is not too large, an existing bank will extend a new loan to recover some of the loan amount
- ▶ Banks provide a loan to a company that is not creditworthy to reduce their losses on the outstanding loan
- ▶ This can delay the failure of a company and **expose other creditors** to additional risks if they are unaware of the impending default

Summary

- ▶ If the outstanding loan is not too large, an existing bank will extend a new loan to recover some of the loan amount
- ▶ Banks provide a loan to a company that is not creditworthy to reduce their losses on the outstanding loan
- ▶ This can delay the failure of a company and expose other creditors to additional risks if they are unaware of the impending default
