Stock valuation models

The importance of stock valuation

The importance of stock valuation

- ▶ Stock valuation is one of the most important tasks when making **investment decisions**

The importance of stock valuation

- ▶ Stock valuation is one of the most important tasks when making investment decisions
- ▶ If the current price is **below** its value, then a stock is **undervalued**

The importance of stock valuation

- ▶ Stock valuation is one of the most important tasks when making investment decisions
- ▶ If the current price is below its value, then a stock is undervalued and **purchasing** it should generate excess profits

The importance of stock valuation

- ▶ Stock valuation is one of the most important tasks when making investment decisions
- ▶ If the current price is below its value, then a stock is undervalued and purchasing it should generate excess profits
- ▶ If the current price is **above** its value, then a stock is **overvalued**

The importance of stock valuation

- ▶ Stock valuation is one of the most important tasks when making investment decisions
- ▶ If the current price is below its value, then a stock is undervalued and purchasing it should generate excess profits
- ▶ If the current price is above its value, then a stock is overvalued and **selling** it should generate excess profits

The importance of stock valuation

- ▶ Stock valuation is one of the most important tasks when making investment decisions
- ▶ If the current price is below its value, then a stock is undervalued and purchasing it should generate excess profits
- ▶ If the current price is above its value, then a stock is overvalued and selling it should generate excess profits
- ▶ Stock valuation is also relevant in **mergers & acquisitions**

The importance of stock valuation

- ▶ Stock valuation is one of the most important tasks when making investment decisions
- ▶ If the current price is below its value, then a stock is undervalued and purchasing it should generate excess profits
- ▶ If the current price is above its value, then a stock is overvalued and selling it should generate excess profits
- ▶ Stock valuation is also relevant in mergers & acquisitions as well as **initial public offerings**

The importance of stock valuation

- ▶ Stock valuation is one of the most important tasks when making investment decisions
- ▶ If the current price is below its value, then a stock is undervalued and purchasing it should generate excess profits
- ▶ If the current price is above its value, then a stock is overvalued and selling it should generate excess profits
- ▶ Stock valuation is also relevant in mergers & acquisitions as well as initial public offerings

Theory and practice of stock valuation

Theory and practice of stock valuation

- ▶ Many techniques to **value stocks** have been developed

Theory and practice of stock valuation

- ▶ Many techniques to value stocks have been developed, often based on **practical experience**

Theory and practice of stock valuation

- ▶ Many techniques to value stocks have been developed, often based on practical experience
- ▶ A stock might be valued by looking at the valuation of **other stocks**

Theory and practice of stock valuation

- ▶ Many techniques to value stocks have been developed, often based on practical experience
- ▶ A stock might be valued by looking at the valuation of other stocks, after making **suitable adjustments**

Theory and practice of stock valuation

- ▶ Many techniques to value stocks have been developed, often based on practical experience
- ▶ A stock might be valued by looking at the valuation of other stocks, after making suitable adjustments
- ▶ We will here look at a **basic** valuation of stocks based on the benefits that accrue to their owners

Theory and practice of stock valuation

- ▶ Many techniques to value stocks have been developed, often based on practical experience
- ▶ A stock might be valued by looking at the valuation of other stocks, after making suitable adjustments
- ▶ We will here look at a basic valuation of stocks based on the benefits that accrue to their owners

Discounted Cash Flows

Valuation using discounted cash flows

Valuation using discounted cash flows

- ▶ Stocks should be valued using the **present value of future dividends** or earnings

Valuation using discounted cash flows

- ▶ Stocks should be valued using the present value of future dividends or earnings
- ▶ While past performance can give an indication of future prospects, the analysis is based on **future prospects** only

Valuation using discounted cash flows

- ▶ Stocks should be valued using the present value of future dividends or earnings
- ▶ While past performance can give an indication of future prospects, the analysis is based on future prospects only
- ? You find that two stocks have **different price-earnings ratios**, does this imply that at least one of the stocks is **mispriced**?

Valuation using discounted cash flows

- ▶ Stocks should be valued using the present value of future dividends or earnings
- ▶ While past performance can give an indication of future prospects, the analysis is based on future prospects only
- ? You find that two stocks have different price-earnings ratios, does this imply that at least one of the stocks is mispriced?

Valuation using discounted cash flows

- ▶ Stocks should be valued using the present value of future dividends or earnings
- ▶ While past performance can give an indication of future prospects, the analysis is based on future prospects only
- ? You find that two stocks have different price-earnings ratios, does this imply that at least one of the stocks is mispriced?
- ! The stocks might have **different risks** and hence different discount rates, or their earnings might have **different growth rates**

Valuation using discounted cash flows

- ▶ Stocks should be valued using the present value of future dividends or earnings
- ▶ While past performance can give an indication of future prospects, the analysis is based on future prospects only
- ? You find that two stocks have different price-earnings ratios, does this imply that at least one of the stocks is mispriced?
- ! The stocks might have different risks and hence different discount rates, or their earnings might have different growth rates

Stock prices reflecting information

Stock prices reflecting information

- ▶ Stocks are valued using the present value of future **expected** dividends or earnings

Stock prices reflecting information

- ▶ Stocks are valued using the present value of future expected dividends or earnings
- ▶ To form such expectations, **information** on the company's future prospects have to be formed

Stock prices reflecting information

- ▶ Stocks are valued using the present value of future expected dividends or earnings
- ▶ To form such expectations, information on the company's future prospects have to be formed
- ▶ This information is incorporated into the **stock value**

Stock prices reflecting information

- ▶ Stocks are valued using the present value of future expected dividends or earnings
- ▶ To form such expectations, information on the company's future prospects have to be formed
- ▶ This information is incorporated into the stock value and should then be reflected in the **stock price**

Stock prices reflecting information

- ▶ Stocks are valued using the present value of future expected dividends or earnings
- ▶ To form such expectations, information on the company's future prospects have to be formed
- ▶ This information is incorporated into the stock value and should then be reflected in the stock price
- ▶ We will evaluate how **stock prices evolve** if information is included accurately into stock prices

Stock prices reflecting information

- ▶ Stocks are valued using the present value of future expected dividends or earnings
- ▶ To form such expectations, information on the company's future prospects have to be formed
- ▶ This information is incorporated into the stock value and should then be reflected in the stock price
- ▶ We will evaluate how stock prices evolve if information is included accurately into stock prices

Absence of autocorrelation

Absence of autocorrelation

- ▶ In efficient markets, stock returns should have **no autocorrelation**

Absence of autocorrelation

- ▶ In efficient markets, stock returns should have no autocorrelation
- ▶ Any autocorrelation in information should be **anticipated** and the stock price adjust accordingly

Absence of autocorrelation

- ▶ In efficient markets, stock returns should have no autocorrelation
- ▶ Any autocorrelation in information should be anticipated and the stock price adjust accordingly
- ? You observe that a market is not efficient, can you **make profits** using this knowledge?

Absence of autocorrelation

- ▶ In efficient markets, stock returns should have no autocorrelation
- ▶ Any autocorrelation in information should be anticipated and the stock price adjust accordingly
- ? You observe that a market is not efficient, can you make profits using this knowledge?

Absence of autocorrelation

- ▶ In efficient markets, stock returns should have no autocorrelation
- ▶ Any autocorrelation in information should be anticipated and the stock price adjust accordingly
- ? You observe that a market is not efficient, can you make profits using this knowledge?
- ! Profits can only be made by investors that have **access to information**, otherwise it would be impossible to develop a trading strategy

Absence of autocorrelation

- ▶ In efficient markets, stock returns should have no autocorrelation
- ▶ Any autocorrelation in information should be anticipated and the stock price adjust accordingly
- ? You observe that a market is not efficient, can you make profits using this knowledge?
- ! Profits can only be made by investors that have access to information, otherwise it would be impossible to develop a trading strategy

Defining profitable investments

Defining profitable investments

- ▶ Companies require capital to pursue **investments** from which they obtain earnings

Defining profitable investments

- ▶ Companies require capital to pursue investments from which they obtain earnings
- ▶ Only **profitable** investments should be pursued and we will discuss the criterion to assess whether an investment is profitable

Defining profitable investments

- ▶ Companies require capital to pursue investments from which they obtain earnings
- ▶ Only profitable investments should be pursued and we will discuss the criterion to assess whether an investment is profitable
- ▶ Making investments will affect the company value and we will determine the **size** of this effect

Defining profitable investments

- ▶ Companies require capital to pursue investments from which they obtain earnings
- ▶ Only profitable investments should be pursued and we will discuss the criterion to assess whether an investment is profitable
- ▶ Making investments will affect the company value and we will determine the size of this effect

Andreas Krause

Investment decisions by companies

Investment decisions and financing

Investment decisions and financing

- ▶ Whether investment are pursued should be assessed by using **Net Present Value**

Investment decisions and financing

- ▶ Whether investment are pursued should be assessed by using Net Present Value
- ▶ The Net Present Value will depend on the way an investment is **financed**

Investment decisions and financing

- ▶ Whether investment are pursued should be assessed by using Net Present Value
- ▶ The Net Present Value will depend on the way an investment is financed
- ? A company announces a new investment that was **well anticipated** by investors, how much should the stock price increase?

Investment decisions and financing

- ▶ Whether investment are pursued should be assessed by using Net Present Value
- ▶ The Net Present Value will depend on the way an investment is financed
- ? A company announces a new investment that was well anticipated by investors, how much should the stock price increase?

Investment decisions and financing

- ▶ Whether investment are pursued should be assessed by using Net Present Value
- ▶ The Net Present Value will depend on the way an investment is financed
- ? A company announces a new investment that was well anticipated by investors, how much should the stock price increase?
- ! The stock price should **not change** as it was anticipated and in an **efficient market** this information should already have been included into the stock price

Investment decisions and financing

- ▶ Whether investment are pursued should be assessed by using Net Present Value
- ▶ The Net Present Value will depend on the way an investment is financed
- ? A company announces a new investment that was well anticipated by investors, how much should the stock price increase?
- ! The stock price should not change as it was anticipated and in an efficient market this information should already have been included into the stock price

Summary

Summary

- ▶ Stock valuation and valuing individual investments by companies are driven by the **present value of future earnings**

Summary

- ▶ Stock valuation and valuing individual investments by companies are driven by the present value of future earnings
- ▶ The **discount factor** depends on who the earnings accrue to

Summary

- ▶ Stock valuation and valuing individual investments by companies are driven by the present value of future earnings
- ▶ The discount factor depends on who the earnings accrue to
- ▶ The **Weighted Average Cost of Capital** is used if they accrue to the company

Summary

- ▶ Stock valuation and valuing individual investments by companies are driven by the present value of future earnings
- ▶ The discount factor depends on who the earnings accrue to
- ▶ The Weighted Average Cost of Capital is used if they accrue to the company
- ▶ The **cost of equity** is used if they accrue to equity holders

Summary

- ▶ Stock valuation and valuing individual investments by companies are driven by the present value of future earnings
- ▶ The discount factor depends on who the earnings accrue to
- ▶ The Weighted Average Cost of Capital is used if they accrue to the company
- ▶ The cost of equity is used if they accrue to equity holders
- ▶ If markets are **efficient**, stock prices cannot be predicted

Summary

- ▶ Stock valuation and valuing individual investments by companies are driven by the present value of future earnings
- ▶ The discount factor depends on who the earnings accrue to
- ▶ The Weighted Average Cost of Capital is used if they accrue to the company
- ▶ The cost of equity is used if they accrue to equity holders
- ▶ If markets are efficient, stock prices cannot be predicted
