Valuing Futures and swaps

Arbitrage pricing

Arbitrage pricing

- ▶ Derivatives are securities or contracts whose values are derived from the **value of other securities** or assets

Arbitrage pricing

- ▶ Derivatives are securities or contracts whose values are derived from the value of other securities or assets
- ▶ A common way to determine their value is by **arbitrage**

Arbitrage pricing

- ▶ Derivatives are securities or contracts whose values are derived from the value of other securities or assets
- ▶ A common way to determine their value is by arbitrage
- ▶ The principle of arbitrage is that if two securities provide the **same payment in all circumstances**, their **value must be identical**

Arbitrage pricing

- ▶ Derivatives are securities or contracts whose values are derived from the value of other securities or assets
- ▶ A common way to determine their value is by arbitrage
- ▶ The principle of arbitrage is that if two securities provide the same payment in all circumstances, their value must be identical
- ▶ This technique is used particularly in **option pricing**

Arbitrage pricing

- ▶ Derivatives are securities or contracts whose values are derived from the value of other securities or assets
- ▶ A common way to determine their value is by arbitrage
- ▶ The principle of arbitrage is that if two securities provide the same payment in all circumstances, their value must be identical
- ▶ This technique is used particularly in option pricing

The use of derivatives

The use of derivatives

- ▶ Most derivatives have originally been developed to allow investors to **hedge risks**

The use of derivatives

- ▶ Most derivatives have originally been developed to allow investors to hedge risks
- ▶ Their characteristics also allow investors to take **large risks** without making large investments

The use of derivatives

- ▶ Most derivatives have originally been developed to allow investors to hedge risks
- ▶ Their characteristics also allow investors to take large risks without making large investments, making them attractive to **traders**

The use of derivatives

- ▶ Most derivatives have originally been developed to allow investors to hedge risks
- ▶ Their characteristics also allow investors to take large risks without making large investments, making them attractive to traders
- ▶ The value of a derivative is often referred to as its **premium**

The use of derivatives

- ▶ Most derivatives have originally been developed to allow investors to hedge risks
- ▶ Their characteristics also allow investors to take large risks without making large investments, making them attractive to traders
- ▶ The value of a derivative is often referred to as its premium and this premium is **small** compared to the potential profits and losses

The use of derivatives

- ▶ Most derivatives have originally been developed to allow investors to hedge risks
- ▶ Their characteristics also allow investors to take large risks without making large investments, making them attractive to traders
- ▶ The value of a derivative is often referred to as its premium and this premium is small compared to the potential profits and losses

Use of futures

Use of futures

- ▶ Suppose a company will receive a payment from a customer **in the future** and **in a foreign currency**

Use of futures

- ▶ Suppose a company will receive a payment from a customer in the future and in a foreign currency
- ▶ This exposes the company to **currency risk**

Use of futures

- ▶ Suppose a company will receive a payment from a customer in the future and in a foreign currency
- ▶ This exposes the company to currency risk
- ▶ Suppose a company will have to **obtain a commodity** for its production **in the future**

Use of futures

- ▶ Suppose a company will receive a payment from a customer in the future and in a foreign currency
- ▶ This exposes the company to currency risk
- ▶ Suppose a company will have to obtain a commodity for its production in the future
- ▶ This exposes the company to **commodity price risk**

Use of futures

- ▶ Suppose a company will receive a payment from a customer in the future and in a foreign currency
- ▶ This exposes the company to currency risk
- ▶ Suppose a company will have to obtain a commodity for its production in the future
- ▶ This exposes the company to commodity price risk
- ▶ Futures and forwards allow the company to **avoid such risk**

Use of futures

- ▶ Suppose a company will receive a payment from a customer in the future and in a foreign currency
- ▶ This exposes the company to currency risk
- ▶ Suppose a company will have to obtain a commodity for its production in the future
- ▶ This exposes the company to commodity price risk
- ▶ Futures and forwards allow the company to avoid such risk
- ▶ We will first look at the **valuation** and use of such forward and future contracts

Use of futures

- ▶ Suppose a company will receive a payment from a customer in the future and in a foreign currency
- ▶ This exposes the company to currency risk
- ▶ Suppose a company will have to obtain a commodity for its production in the future
- ▶ This exposes the company to commodity price risk
- ▶ Futures and forwards allow the company to avoid such risk
- ▶ We will first look at the valuation and use of such forward and future contracts

Andreas Krause

Forwards and futures

Key characteristics of futures and forwards

Key characteristics of futures and forwards

- ▶ Futures and forwards are a contract in which the buyer (seller) has the **obligation** to buy (sell) the underlying asset at the agreed time and agreed price

Key characteristics of futures and forwards

- ▶ Futures and forwards are a contract in which the buyer (seller) has the obligation to buy (sell) the underlying asset at the agreed time and agreed price
- ▶ The value of a futures and forwards can be obtained from the **profits expected at maturity**

Key characteristics of futures and forwards

- ▶ Futures and forwards are a contract in which the buyer (seller) has the obligation to buy (sell) the underlying asset at the agreed time and agreed price
- ▶ The value of a futures and forwards can be obtained from the profits expected at maturity, adjusted for the **net costs** of obtaining the underlying asset instantly

Key characteristics of futures and forwards

- ▶ Futures and forwards are a contract in which the buyer (seller) has the obligation to buy (sell) the underlying asset at the agreed time and agreed price
- ▶ The value of a futures and forwards can be obtained from the profits expected at maturity, adjusted for the net costs of obtaining the underlying asset instantly
- ? Would anyone purchase a futures which has a **negative value**?

Key characteristics of futures and forwards

- ▶ Futures and forwards are a contract in which the buyer (seller) has the obligation to buy (sell) the underlying asset at the agreed time and agreed price
- ▶ The value of a futures and forwards can be obtained from the profits expected at maturity, adjusted for the net costs of obtaining the underlying asset instantly
- ? Would anyone purchase a futures which has a negative value?

Key characteristics of futures and forwards

- ▶ Futures and forwards are a contract in which the buyer (seller) has the obligation to buy (sell) the underlying asset at the agreed time and agreed price
- ▶ The value of a futures and forwards can be obtained from the profits expected at maturity, adjusted for the net costs of obtaining the underlying asset instantly
- ? Would anyone purchase a futures which has a negative value?
- ! If a futures has a negative value, the purchaser would be **paid for buying** the futures, compensating him for the negative value

Key characteristics of futures and forwards

- ▶ Futures and forwards are a contract in which the buyer (seller) has the obligation to buy (sell) the underlying asset at the agreed time and agreed price
- ▶ The value of a futures and forwards can be obtained from the profits expected at maturity, adjusted for the net costs of obtaining the underlying asset instantly
- ? Would anyone purchase a futures which has a negative value?
- ! If a futures has a negative value, the purchaser would be paid for buying the futures, compensating him for the negative value

Futures and forwards for hedging

Futures and forwards for hedging

- ▶ Futures are available for a range of **standard financial securities**

Futures and forwards for hedging

- ▶ Futures are available for a range of standard financial securities, **currencies**

Futures and forwards for hedging

- ▶ Futures are available for a range of standard financial securities, currencies and **commodities**

Futures and forwards for hedging

- ▶ Futures are available for a range of standard financial securities, currencies and commodities and more contracts can be agreed using **forwards**

Futures and forwards for hedging

- ▶ Futures are available for a range of standard financial securities, currencies and commodities and more contracts can be agreed using forwards
- ▶ We will see how futures and forwards can be used to **eliminate risks** for investors

Futures and forwards for hedging

- ▶ Futures are available for a range of standard financial securities, currencies and commodities and more contracts can be agreed using forwards
- ▶ We will see how futures and forwards can be used to eliminate risks for investors
- ▶ **Not for all investments** futures can be found or forwards be agreed

Futures and forwards for hedging

- ▶ Futures are available for a range of standard financial securities, currencies and commodities and more contracts can be agreed using forwards
- ▶ We will see how futures and forwards can be used to eliminate risks for investors
- ▶ Not for all investments futures can be found or forwards be agreed, investors will use an **imperfect hedge** with a closely related underlying asset to reduce risks

Futures and forwards for hedging

- ▶ Futures are available for a range of standard financial securities, currencies and commodities and more contracts can be agreed using forwards
- ▶ We will see how futures and forwards can be used to eliminate risks for investors
- ▶ Not for all investments futures can be found or forwards be agreed, investors will use an imperfect hedge with a closely related underlying asset to reduce risks
- ▶ If **portfolios with many components** are to be hedged, the costs may also prevent the use of a large number of futures and forwards

Futures and forwards for hedging

- ▶ Futures are available for a range of standard financial securities, currencies and commodities and more contracts can be agreed using forwards
- ▶ We will see how futures and forwards can be used to eliminate risks for investors
- ▶ Not for all investments futures can be found or forwards be agreed, investors will use an imperfect hedge with a closely related underlying asset to reduce risks
- ▶ If portfolios with many components are to be hedged, the costs may also prevent the use of a large number of futures and forwards

Andreas Krause

Hedging with futures

Futures and forwards eliminating risks and opportunities

Futures and forwards eliminating risks and opportunities

- ▶ Futures and forwards allow to eliminate risks **completely**

Futures and forwards eliminating risks and opportunities

- ▶ Futures and forwards allow to eliminate risks completely if the underlying asset **matches** the risk

Futures and forwards eliminating risks and opportunities

- ▶ Futures and forwards allow to eliminate risks completely if the underlying asset matches the risk
- ▶ These contracts also **eliminate** any possible **gains** that investors could make

Futures and forwards eliminating risks and opportunities

- ▶ Futures and forwards allow to eliminate risks completely if the underlying asset matches the risk
- ▶ These contracts also eliminate any possible gains that investors could make
- ▶ Most futures are **short-term**

Futures and forwards eliminating risks and opportunities

- ▶ Futures and forwards allow to eliminate risks completely if the underlying asset matches the risk
- ▶ These contracts also eliminate any possible gains that investors could make
- ▶ Most futures are short-term and for long-term hedges, contracts need to be **rolled over** frequently

Futures and forwards eliminating risks and opportunities

- ▶ Futures and forwards allow to eliminate risks completely if the underlying asset matches the risk
- ▶ These contracts also eliminate any possible gains that investors could make
- ▶ Most futures are short-term and for long-term hedges, contracts need to be rolled over frequently
- ▶ **Forwards** can be agreed to provide more long-term hedging

Futures and forwards eliminating risks and opportunities

- ▶ Futures and forwards allow to eliminate risks completely if the underlying asset matches the risk
- ▶ These contracts also eliminate any possible gains that investors could make
- ▶ Most futures are short-term and for long-term hedges, contracts need to be rolled over frequently
- ▶ Forwards can be agreed to provide more long-term hedging

Use of swaps

Use of swaps

- ▶ A company has obtained a loan in their home country and invest this loan into an **overseas** subsidiary

Use of swaps

- ▶ A company has obtained a loan in their home country and invest this loan into an overseas subsidiary
- ▶ The investment takes the form of a loan, which is denominated in the **subsidiary's currency**

Use of swaps

- ▶ A company has obtained a loan in their home country and invest this loan into an overseas subsidiary
- ▶ The investment takes the form of a loan, which is denominated in the subsidiary's currency
- ▶ Receiving payments from the subsidiary in a different currency is exposing the company to **currency risk**

Use of swaps

- ▶ A company has obtained a loan in their home country and invest this loan into an overseas subsidiary
- ▶ The investment takes the form of a loan, which is denominated in the subsidiary's currency
- ▶ Receiving payments from the subsidiary in a different currency is exposing the company to currency risk
- ▶ A bank attracts deposits on which it agrees to pay interest that **tracks** the current interest rate in the money market

Use of swaps

- ▶ A company has obtained a loan in their home country and invest this loan into an overseas subsidiary
- ▶ The investment takes the form of a loan, which is denominated in the subsidiary's currency
- ▶ Receiving payments from the subsidiary in a different currency is exposing the company to currency risk
- ▶ A bank attracts deposits on which it agrees to pay interest that tracks the current interest rate in the money market
- ▶ These deposits are used to provide loans for which **fixed conditions**, including the loan rate, are agreed

Use of swaps

- ▶ A company has obtained a loan in their home country and invest this loan into an overseas subsidiary
- ▶ The investment takes the form of a loan, which is denominated in the subsidiary's currency
- ▶ Receiving payments from the subsidiary in a different currency is exposing the company to currency risk
- ▶ A bank attracts deposits on which it agrees to pay interest that tracks the current interest rate in the money market
- ▶ These deposits are used to provide loans for which fixed conditions, including the loan rate, are agreed
- ▶ This exposes the bank to **interest rate risk**

Use of swaps

- ▶ A company has obtained a loan in their home country and invest this loan into an overseas subsidiary
- ▶ The investment takes the form of a loan, which is denominated in the subsidiary's currency
- ▶ Receiving payments from the subsidiary in a different currency is exposing the company to currency risk
- ▶ A bank attracts deposits on which it agrees to pay interest that tracks the current interest rate in the money market
- ▶ These deposits are used to provide loans for which fixed conditions, including the loan rate, are agreed
- ▶ This exposes the bank to interest rate risk
- ▶ **Swaps** can be used in both cases to eliminate these risks

Use of swaps

- ▶ A company has obtained a loan in their home country and invest this loan into an overseas subsidiary
- ▶ The investment takes the form of a loan, which is denominated in the subsidiary's currency
- ▶ Receiving payments from the subsidiary in a different currency is exposing the company to currency risk
- ▶ A bank attracts deposits on which it agrees to pay interest that tracks the current interest rate in the money market
- ▶ These deposits are used to provide loans for which fixed conditions, including the loan rate, are agreed
- ▶ This exposes the bank to interest rate risk
- ▶ Swaps can be used in both cases to eliminate these risks

Swaps allowing to hedge multiple payments

Swaps allowing to hedge multiple payments

- ▶ Swaps can be used to exchange payments that are **determined differently**

Swaps allowing to hedge multiple payments

- ▶ Swaps can be used to exchange payments that are determined differently, in **different currencies**

Swaps allowing to hedge multiple payments

- ▶ Swaps can be used to exchange payments that are determined differently, in different currencies or at **different interest rates**

Swaps allowing to hedge multiple payments

- ▶ Swaps can be used to exchange payments that are determined differently, in different currencies or at different interest rates
- ▶ As with futures, swaps **eliminate** any opportunity to make **gains**

Swaps allowing to hedge multiple payments

- ▶ Swaps can be used to exchange payments that are determined differently, in different currencies or at different interest rates
- ▶ As with futures, swaps eliminate any opportunity to make gains
- ? Why would investors use a swap rather than hedge their risks with **futures**?

Swaps allowing to hedge multiple payments

- ▶ Swaps can be used to exchange payments that are determined differently, in different currencies or at different interest rates
- ▶ As with futures, swaps eliminate any opportunity to make gains
- ? Why would investors use a swap rather than hedge their risks with futures?

Swaps allowing to hedge multiple payments

- ▶ Swaps can be used to exchange payments that are determined differently, in different currencies or at different interest rates
- ▶ As with futures, swaps eliminate any opportunity to make gains
- ? Why would investors use a swap rather than hedge their risks with futures?
- ! Swaps hedge **multiple payments** over a long period of time, negating the need for a **large number of futures contracts** and avoiding the problem of having no long-term futures contracts available

Swaps allowing to hedge multiple payments

- ▶ Swaps can be used to exchange payments that are determined differently, in different currencies or at different interest rates
- ▶ As with futures, swaps eliminate any opportunity to make gains
- ? Why would investors use a swap rather than hedge their risks with futures?
- ! Swaps hedge multiple payments over a long period of time, negating the need for a large number of futures contracts and avoiding the problem of having no long-term futures contracts available

Summary

Summary

- ▶ Futures, forwards, and swaps allow to hedge against adverse movements in markets

Summary

- ▶ Futures, forwards, and swaps allow to hedge against adverse movements in markets, but they also **eliminate any possible gains**

Summary

- ▶ Futures, forwards, and swaps allow to hedge against adverse movements in markets, but they also eliminate any possible gains
- ▶ These instruments have been designed to **eliminate the risks** arising from future payments, either to be made or to be received

Summary

- ▶ Futures, forwards, and swaps allow to hedge against adverse movements in markets, but they also eliminate any possible gains
- ▶ These instruments have been designed to eliminate the risks arising from future payments, either to be made or to be received
- ▶ The **value** of these derivatives depends on the payments that are made and/or received, adjusted for any costs

Summary

- ▶ Futures, forwards, and swaps allow to hedge against adverse movements in markets, but they also eliminate any possible gains
- ▶ These instruments have been designed to eliminate the risks arising from future payments, either to be made or to be received
- ▶ The value of these derivatives depends on the payments that are made and/or received, adjusted for any costs
