**Strong form efficiency** Prices reflect all available information, including private information

# Asset returns

## Asset returns

- ▶ Asset values are derived from the **future income** they generate
- ▶ 
$$P_t = \sum_{\tau=0}^{+\infty} \frac{E[D_{t+\tau}]}{}$$

## Asset returns

- ▶ Asset values are derived from the **future income** they generate, **discounted** to the present value
- ▶ 
$$P_t = \sum_{\tau=0}^{+\infty} \frac{E[D_{t+\tau}]}{\rho^\tau}$$

## Asset returns

- ▶ Asset values are derived from the **future income** they generate, **discounted** to the present value
- ▶ The future income is determined using the **information available at the time**
- ▶ 
$$P_t = \sum_{\tau=0}^{+\infty} \frac{\mathbb{E}[D_{t+\tau} | \Omega_t]}{\rho^\tau}$$

## Asset returns

- ▶ Asset values are derived from the future income they generate, discounted to the present value
- ▶ The future income is determined using the information available at the time
- ▶  $P_t = \sum_{\tau=0}^{+\infty} \frac{E[D_{t+\tau} | \Omega_t]}{\rho^\tau} = D_t + \frac{E[P_{t+1} | \Omega_t]}{\rho}$

## Asset returns

- ▶ Asset values are derived from the future income they generate, discounted to the present value
- ▶ The future income is determined using the information available at the time
- ▶ 
$$P_t = \sum_{\tau=0}^{+\infty} \frac{E[D_{t+\tau} | \Omega_t]}{\rho^\tau} = D_t + \frac{E[P_{t+1} | \Omega_t]}{\rho}$$
- ▶ For short-term returns, we can neglect the future income and set  $E[d_{t+\tau} | \Omega_t] = 0$

## Asset returns

- ▶ Asset values are derived from the future income they generate, discounted to the present value
- ▶ The future income is determined using the information available at the time
- ▶ 
$$P_t = \sum_{\tau=0}^{+\infty} \frac{E[D_{t+\tau} | \Omega_t]}{\rho^\tau} = D_t + \frac{E[P_{t+1} | \Omega_t]}{\rho}$$
- ▶ For short-term returns, we can neglect the future income and set  $E[d_{t+\tau} | \Omega_t] = 0$

⇒  $\rho = \frac{E[P_{t+1} | \Omega_t]}{P_t}$

## Asset returns

- ▶ Asset values are derived from the future income they generate, discounted to the present value
- ▶ The future income is determined using the information available at the time
- ▶ 
$$P_t = \sum_{\tau=0}^{+\infty} \frac{E[D_{t+\tau} | \Omega_t]}{\rho^\tau} = D_t + \frac{E[P_{t+1} | \Omega_t]}{\rho}$$
- ▶ For short-term returns, we can neglect the future income and set  $E[d_{t+\tau} | \Omega_t] = 0$

⇒  $\rho = \frac{E[P_{t+1} | \Omega_t]}{P_t} = \frac{E[P_{t+2} | \Omega_{t+1}]}{P_{t+1}}$

## Asset returns

- ▶ Asset values are derived from the future income they generate, discounted to the present value
- ▶ The future income is determined using the information available at the time

$$P_t = \sum_{\tau=0}^{+\infty} \frac{E[D_{t+\tau} | \Omega_t]}{\rho^\tau} = D_t + \frac{E[P_{t+1} | \Omega_t]}{\rho}$$

- ▶ For short-term returns, we can neglect the future income and set  $E[d_{t+\tau} | \Omega_t] = 0$

$$\Rightarrow \rho = \frac{E[P_{t+1} | \Omega_t]}{P_t} = \frac{E[P_{t+2} | \Omega_{t+1}]}{P_{t+1}}$$

$$\Rightarrow \rho = E \left[ \frac{E[P_{t+2} | \Omega_{t+1}]}{P_{t+1}} | \Omega_t \right]$$

## Asset returns

- ▶ Asset values are derived from the future income they generate, discounted to the present value
- ▶ The future income is determined using the information available at the time
- ▶ 
$$P_t = \sum_{\tau=0}^{+\infty} \frac{E[D_{t+\tau} | \Omega_t]}{\rho^\tau} = D_t + \frac{E[P_{t+1} | \Omega_t]}{\rho}$$
- ▶ For short-term returns, we can neglect the future income and set  $E[d_{t+\tau} | \Omega_t] = 0$

⇒  $\rho = \frac{E[P_{t+1} | \Omega_t]}{P_t} = \frac{E[P_{t+2} | \Omega_{t+1}]}{P_{t+1}}$

⇒  $\rho = E \left[ \frac{E[P_{t+2} | \Omega_{t+1}]}{P_{t+1}} | \Omega_t \right] \approx \frac{E[P_{t+2} | \Omega_t]}{E[P_{t+1} | \Omega_t]}$

# Asset returns

- ▶ Asset values are derived from the future income they generate, discounted to the present value
- ▶ The future income is determined using the information available at the time

$$P_t = \sum_{\tau=0}^{+\infty} \frac{E[D_{t+\tau} | \Omega_t]}{\rho^\tau} = D_t + \frac{E[P_{t+1} | \Omega_t]}{\rho}$$
