

Andreas Krause

Dividend irrelevance and moral hazard

Dividends and equity increases

Dividends and equity increases

- ▶ Dividends represent the payments made to **shareholders** of a company

Dividends and equity increases

- ▶ Dividends represent the payments made to shareholders of a company and **reduce the equity** the company holds

Dividends and equity increases

- ▶ Dividends represent the payments made to shareholders of a company and reduce the equity the company holds
- ▶ This reduction in equity could lead to a **reduction in investments** the company can make

Dividends and equity increases

- ▶ Dividends represent the payments made to shareholders of a company and reduce the equity the company holds
- ▶ This reduction in equity could lead to a reduction in investments the company can make
- ▶ Companies can **raise equity** to increase the investments they can make

Dividends and equity increases

- ▶ Dividends represent the payments made to shareholders of a company and reduce the equity the company holds
- ▶ This reduction in equity could lead to a reduction in investments the company can make
- ▶ Companies can raise equity to increase the investments they can make
- ▶ Dividends enter the formula **valuing the company**

Dividends and equity increases

- ▶ Dividends represent the payments made to shareholders of a company and reduce the equity the company holds
- ▶ This reduction in equity could lead to a reduction in investments the company can make
- ▶ Companies can raise equity to increase the investments they can make
- ▶ Dividends enter the formula valuing the company and reducing them should **reduce the company value**

Dividends and equity increases

- ▶ Dividends represent the payments made to shareholders of a company and reduce the equity the company holds
- ▶ This reduction in equity could lead to a reduction in investments the company can make
- ▶ Companies can raise equity to increase the investments they can make
- ▶ Dividends enter the formula valuing the company and reducing them should reduce the company value

Replacing dividends with equity increases

Replacing dividends with equity increases

▶ The current price should reflect the **present value** of the **future dividend**

▶
$$P_t = \frac{d_{t+1}}{1+\mu}$$

Replacing dividends with equity increases

- ▶ The current price should reflect the **present value** of the **future dividend** and the **price** that can be obtained
- ▶
$$P_t = \frac{d_{t+1} + P_{t+1}}{1 + \mu}$$

Replacing dividends with equity increases

- ▶ The current price should reflect the present value of the future dividend and the price that can be obtained
- ▶ $P_t = \frac{d_{t+1} + P_{t+1}}{1 + \mu}$
- ▶ A company makes **investments** which are financed by **retained earnings**
- ▶ $I_{t+1} = (E_t - d_{t+1})$

Replacing dividends with equity increases

- ▶ The current price should reflect the present value of the future dividend and the price that can be obtained
- ▶ $P_t = \frac{d_{t+1} + P_{t+1}}{1 + \mu}$
- ▶ A company makes investments which are financed by retained earnings and the **issue of new shares**
- ▶ $I_{t+1} = (E_t - d_{t+1}) + S_{t+1}$

Replacing dividends with equity increases

- ▶ The current price should reflect the present value of the future dividend and the price that can be obtained
 - ▶ $P_t = \frac{d_{t+1} + P_{t+1}}{1 + \mu}$
 - ▶ A company makes investments which are financed by retained earnings and the issue of new shares
 - ▶ $I_{t+1} = (E_t - d_{t+1}) + S_{t+1}$
- ⇒ $d_{t+1} = E_t + S_{t+1} - I_{t+1}$

Replacing dividends with equity increases

- ▶ The current price should reflect the present value of the future dividend and the price that can be obtained
 - ▶ $P_t = \frac{d_{t+1} + P_{t+1}}{1 + \mu}$
 - ▶ A company makes investments which are financed by retained earnings and the issue of new shares
 - ▶ $I_{t+1} = (E_t - d_{t+1}) + S_{t+1}$
- ⇒ $d_{t+1} = E_t + S_{t+1} - I_{t+1}$
- ⇒ $P_t = \frac{E_t + S_{t+1} - I_{t+1} + P_{t+1}}{1 + \mu}$

Replacing dividends with equity increases

- ▶ The current price should reflect the present value of the future dividend and the price that can be obtained
- ▶ $P_t = \frac{d_{t+1} + P_{t+1}}{1 + \mu}$
- ▶ A company makes investments which are financed by retained earnings and the issue of new shares
- ▶ $I_{t+1} = (E_t - d_{t+1}) + S_{t+1}$
- ⇒ $d_{t+1} = E_t + S_{t+1} - I_{t+1}$
- ⇒ $P_t = \frac{E_t + S_{t+1} - I_{t+1} + P_{t+1}}{1 + \mu}$
- ▶ Dividends are **not** part of the value of the company

Replacing dividends with equity increases

- ▶ The current price should reflect the present value of the future dividend and the price that can be obtained
- ▶ $P_t = \frac{d_{t+1} + P_{t+1}}{1 + \mu}$
- ▶ A company makes investments which are financed by retained earnings and the issue of new shares
- ▶ $I_{t+1} = (E_t - d_{t+1}) + S_{t+1}$
- ⇒ $d_{t+1} = E_t + S_{t+1} - I_{t+1}$
- ⇒ $P_t = \frac{E_t + S_{t+1} - I_{t+1} + P_{t+1}}{1 + \mu}$
- ▶ Dividends are not part of the value of the company and hence dividends are **irrelevant**

Replacing dividends with equity increases

- ▶ The current price should reflect the present value of the future dividend and the price that can be obtained
- ▶ $P_t = \frac{d_{t+1} + P_{t+1}}{1 + \mu}$
- ▶ A company makes investments which are financed by retained earnings and the issue of new shares
- ▶ $I_{t+1} = (E_t - d_{t+1}) + S_{t+1}$
- ⇒ $d_{t+1} = E_t + S_{t+1} - I_{t+1}$
- ⇒ $P_t = \frac{E_t + S_{t+1} - I_{t+1} + P_{t+1}}{1 + \mu}$
- ▶ Dividends are not part of the value of the company and hence dividends are irrelevant

Pay out and take back

Pay out and take back

- ▶ Dividend payments can be made at any level and the funds paid out recovered through **issuing shares**

Pay out and take back

- ▶ Dividend payments can be made at any level and the funds paid out recovered through issuing shares
- ▶ The overall value of the company is **not affected**

Pay out and take back

- ▶ Dividend payments can be made at any level and the funds paid out recovered through issuing shares
- ▶ The overall value of the company is not affected
- ▶ This result is known as **Miller and Modigliani's dividend irrelevance**

Pay out and take back

- ▶ Dividend payments can be made at any level and the funds paid out recovered through issuing shares
- ▶ The overall value of the company is not affected
- ▶ This result is known as Miller and Modigliani's dividend irrelevance
- ▶ Implicitly it assumes that companies can continue with investments that **add the same value** in the future as they have in the past

Pay out and take back

- ▶ Dividend payments can be made at any level and the funds paid out recovered through issuing shares
- ▶ The overall value of the company is not affected
- ▶ This result is known as Miller and Modigliani's dividend irrelevance
- ▶ Implicitly it assumes that companies can continue with investments that add the same value in the future as they have in the past

Excess cash holdings

Excess cash holdings

- ▶ Companies generating earnings usually **accumulate cash**

Excess cash holdings

- ▶ Companies generating earnings usually accumulate cash
- ▶ This cash can be used to **make investments**

Excess cash holdings

- ▶ Companies generating earnings usually accumulate cash
- ▶ This cash can be used to make investments or **pay dividends**

Excess cash holdings

- ▶ Companies generating earnings usually accumulate cash
- ▶ This cash can be used to make investments or pay dividends
- ▶ If not sufficient good investments are available, managers might use the excess cash on **vanity projects**

Excess cash holdings

- ▶ Companies generating earnings usually accumulate cash
- ▶ This cash can be used to make investments or pay dividends
- ▶ If not sufficient good investments are available, managers might use the excess cash on vanity projects or **excessive benefits**

Excess cash holdings

- ▶ Companies generating earnings usually accumulate cash
- ▶ This cash can be used to make investments or pay dividends
- ▶ If not sufficient good investments are available, managers might use the excess cash on vanity projects or excessive benefits
- ▶ This **moral hazard** would **reduce the value** of the company

Excess cash holdings

- ▶ Companies generating earnings usually accumulate cash
 - ▶ This cash can be used to make investments or pay dividends
 - ▶ If not sufficient good investments are available, managers might use the excess cash on vanity projects or excessive benefits
 - ▶ This moral hazard would reduce the value of the company
- ⇒ Paying dividends can **reduce moral hazard**

Excess cash holdings

- ▶ Companies generating earnings usually accumulate cash
- ▶ This cash can be used to make investments or pay dividends
- ▶ If not sufficient good investments are available, managers might use the excess cash on vanity projects or excessive benefits
- ▶ This moral hazard would reduce the value of the company
- ⇒ Paying dividends can reduce moral hazard and **increase company value**

Excess cash holdings

- ▶ Companies generating earnings usually accumulate cash
- ▶ This cash can be used to make investments or pay dividends
- ▶ If not sufficient good investments are available, managers might use the excess cash on vanity projects or excessive benefits
- ▶ This moral hazard would reduce the value of the company
- ⇒ Paying dividends can reduce moral hazard and increase company value
