Chapter 15.1: Investment in expertise Theoretical Foundations of Investment Banking Slide 8 of 18

Problem and assumptions	Low price	High price	Optimal expertise	Summary
	○○●	000	0000	0000
Buyer profits				

Trading profits are the value of the security and the trading benefits

Problem and assumptions	Low price ○○●	High price 000	Optimal expertise	Summary 0000
Buyer profits				

Trading profits are the value of the security and the trading benefits, less the price paid

Problem and assumptions	Low price	High price	Optimal expertise	Summary
	○○●	000	0000	0000
Buyer profits				

Trading profits are the value of the security and the trading benefits, less the price paid, if the trade happens

Problem and assumptions	Low price	High price	Optimal expertise	Summary
	○○●	000	0000	0000

- Trading profits are the value of the security and the trading benefits, less the price paid, if the trade happens
- $\Pi_B^i = (\pi (1 \rho_j) (1 \pi) \rho_j) (E[V|L] + \Delta V P^*)$

Problem and assumptions	Low price	High price	Optimal expertise	Summary
000	○○●	000	0000	0000

- Trading profits are the value of the security and the trading benefits, less the price paid, if the trade happens
- $\Pi_B^i = (\pi (1 \rho_j) (1 \pi) \rho_j) (E[V|L] + \Delta V P^*)$
- Value of the security is low as this is the signal of the informed seller

Problem and assumptions	Low price	High price	Optimal expertise	Summary
	○○●	000	0000	0000

- Trading profits are the value of the security and the trading benefits, less the price paid, if the trade happens
- $\Pi_B^i = (\pi (1 \rho_j) (1 \pi) \rho_j) (E[V|L] + \Delta V P^*)$
- Value of the security is low as this is the signal of the informed seller, else no trade would happen at this price

Problem and assumptions	Low price	High price	Optimal expertise	Summary
	○○●	000	0000	0000

- Trading profits are the value of the security and the trading benefits, less the price paid, if the trade happens

Problem and assump		Low price 000	High price ○●○	Optimal expertise 0000	Summary 0000
5	с.,				

- ▶ If the buyer is willing to pay  $P^{**} = E[V|H]$ , trade will always happen as the value of the seller is never above this amount
- ►  $P^{**} = Prob(V_H|H)V_H + (1 Prob(V_H|H))V_L = \rho_j V_H + (1 \rho_j)V_L$

Buyer profits

Problem and assumptions	Low price	High price	Optimal expertise	Summary
	000	○●○	0000	0000
Buyer profits				

► 
$$P^{**} = Prob(V_H|H)V_H + (1 - Prob(V_H|H))V_L = \rho_j V_H + (1 - \rho_j)V_L$$

Trade does not indicate the value of the security

Slide 10 of 18

Problem and assumptions	Low price	High price	Optimal expertise	Summary
	000	○●○	0000	0000
Buyer profits				

► 
$$P^{**} = Prob(V_H|H)V_H + (1 - Prob(V_H|H))V_L = \rho_j V_H + (1 - \rho_j)V_L$$

Trade does not indicate the value of the security as it happens regardless of the signal the seller obtains

Problem and assumptions	Low price	High price	Optimal expertise	Summary
	000	○●○	0000	0000
Buyer profits				

► 
$$P^{**} = Prob(V_H|H)V_H + (1 - Prob(V_H|H))V_L = \rho_j V_H + (1 - \rho_j)V_L$$

► Trade does not indicate the value of the security as it happens regardless of the signal the seller obtains, which is then  $E[V] = \pi V_H + (1 - \pi) V_L$ 

Problem and assumptions	Low price 000	High price ○●○	Optimal expertise	Summary 0000

► 
$$P^{**} = Prob(V_H|H)V_H + (1 - Prob(V_H|H))V_L = \rho_j V_H + (1 - \rho_j)V_L$$

- ► Trade does not indicate the value of the security as it happens regardless of the signal the seller obtains, which is then  $E[V] = \pi V_H + (1 \pi) V_L$
- ► Trader profits:  $\hat{\Pi}_B^i = E[V] + \Delta V P^{**} = \Delta V (V_H V_L) e_j$

Buyer profits

Problem and assumptions	Low price 000	High price ○●○	Optimal expertise	Summary 0000

► 
$$P^{**} = Prob(V_H|H)V_H + (1 - Prob(V_H|H))V_L = \rho_j V_H + (1 - \rho_j)V_L$$

- ► Trade does not indicate the value of the security as it happens regardless of the signal the seller obtains, which is then  $E[V] = \pi V_H + (1 \pi) V_L$
- ► Trader profits:  $\hat{\Pi}_B^i = E[V] + \Delta V P^{**} = \Delta V (V_H V_L) e_j$

Buyer profits

Chapter 15.1: Investment in expertise Theoretical Foundations of Investment Banking Slide 18 of 18

Problem and assumptions	Low price	High price	Optimal expertise	Summary
000	000	000	0000	0000

- Traders are over-qualified
- ▶ The investment bank directs too much resources towards them

Problem and assumptions	Low price	High price	Optimal expertise	Summary
	000	000	0000	00●0

- Traders are over-qualified
- The investment bank directs too much resources towards them
- ► This is individually rational

Problem and assumptions	Low price 000	High price 000	Optimal expertise	Summary 00●0

- Traders are over-qualified
- The investment bank directs too much resources towards them
- ▶ This is individually rational, but socially suboptimal

Problem and assumptions	Low price 000	High price 000	Optimal expertise	Summary 00●0

- Traders are over-qualified
- The investment bank directs too much resources towards them
- ▶ This is individually rational, but socially suboptimal
