

A wide-angle photograph of a city skyline viewed from across a body of water. In the foreground, there's a dark, rippling body of water. Behind it, a row of older, multi-story brick buildings with gabled roofs and dormer windows sits along the waterfront. In the background, a dense cluster of modern skyscrapers with glass facades rises against a clear blue sky. Some of the buildings have unique architectural features, like a tall, thin tower and a building with a curved facade. A construction crane is visible on the right side of the skyline.

Andreas Krause

Chapter 17.1
Viability of partnerships

Outline

- Problem and model assumptions
- Associates joining the partnership
- Taking up partnership offers
- Not appointing unskilled partners
- Mentoring of associates
- Summary

- Problem and model assumptions
- Associates joining the partnership
- Taking up partnership offers
- Not appointing unskilled partners

- Summary

Characteristics of partnerships

Characteristics of partnerships

- ▶ Investment banks were traditionally organised as **partnerships**

Characteristics of partnerships

- ▶ Investment banks were traditionally organised as partnerships
- ▶ The owners are **actively engaged** in the business

Characteristics of partnerships

- ▶ Investment banks were traditionally organised as partnerships
- ▶ The owners are actively engaged in the business, they are called **partners**

Characteristics of partnerships

- ▶ Investment banks were traditionally organised as partnerships
- ▶ The owners are actively engaged in the business, they are called partners
- ▶ New partners are appointed from **existing** employees

Characteristics of partnerships

- ▶ Investment banks were traditionally organised as partnerships
- ▶ The owners are actively engaged in the business, they are called partners
- ▶ New partners are appointed from existing employees, called **associates**

Characteristics of partnerships

- ▶ Investment banks were traditionally organised as partnerships
- ▶ The owners are actively engaged in the business, they are called partners
- ▶ New partners are appointed from existing employees, called associates
- ▶ New partner **buy** a stake in the company

, commercial banks quickly become incorporated. Partnership survive to this day in many management consultancy firms, accountancy firms, and law firms, while investment banks have mostly been incorporated in the second half of the 20th century.

Characteristics of partnerships

- ▶ Investment banks were traditionally organised as partnerships
- ▶ The owners are actively engaged in the business, they are called partners
- ▶ New partners are appointed from existing employees, called associates
- ▶ New partner buy a stake in the company and if they leave, **sell** it to a newly appointed partner

, commercial banks quickly become incorporated. Partnership survive to this day in many management consultancy firms, accountancy firms, and law firms, while investment banks have mostly been incorporated in the second half of the 20th century.

- ▶ The owners are actively engaged in the business, they are called partners
- ▶ New partners are appointed from existing employees, called associates
- ▶ New partner buy a stake in the company and if they leave, sell it to a newly appointed partner

, commercial banks quickly become incorporated. Partnership survive to this day in many management consultancy firms, accountancy firms, and law firms, while investment banks have mostly been incorporated in the second half of the 20th century.

Mentoring associates

Mentoring associates

- ▶ Partners can be either **highly-skilled**, generating surplus V_H

Mentoring associates

- ▶ Partners can be either highly-skilled, generating surplus V_H , or **low-skilled**, generating surplus V_L

Mentoring associates

- ▶ Partners can be either highly-skilled, generating surplus V_H , or low-skilled, generating surplus V_L
- ▶ A partnership has M partners

Mentoring associates

- ▶ Partners can be either highly-skilled, generating surplus V_H , or low-skilled, generating surplus V_L
- ▶ A partnership has M partners
- ▶ Each partner mentors N associates, who might become partners

Mentoring associates

- ▶ Partners can be either highly-skilled, generating surplus V_H , or low-skilled, generating surplus V_L
- ▶ A partnership has M partners
- ▶ Each partner mentors N associates, who might become partners, but **until then** only generate surplus V_L

Mentoring associates

- ▶ Partners can be either highly-skilled, generating surplus V_H , or low-skilled, generating surplus V_L
- ▶ A partnership has M partners
- ▶ Each partner mentors N associates, who might become partners, but until then only generate surplus V_L
- ▶ Mentoring costs C

Mentoring associates

- ▶ Partners can be either highly-skilled, generating surplus V_H , or low-skilled, generating surplus V_L
- ▶ A partnership has M partners
- ▶ Each partner mentors N associates, who might become partners, but until then only generate surplus V_L
- ▶ Mentoring costs C and partners do **not know** the type of partner an associate will be without mentoring

Mentoring associates

- ▶ Partners can be either highly-skilled, generating surplus V_H , or low-skilled, generating surplus V_L
- ▶ A partnership has M partners
- ▶ Each partner mentors N associates, who might become partners, but until then only generate surplus V_L
- ▶ Mentoring costs C and partners do not know the type of partner an associate will be without mentoring
- ▶ Profits to a partner consists of his own surplus V_H

- ▶ $\Pi_P = V_H$

Mentoring associates

- ▶ Partners can be either highly-skilled, generating surplus V_H , or low-skilled, generating surplus V_L
- ▶ A partnership has M partners
- ▶ Each partner mentors N associates, who might become partners, but until then only generate surplus V_L
- ▶ Mentoring costs C and partners do not know the type of partner an associate will be without mentoring
- ▶ Profits to a partner consists of his own surplus V_H and the surplus V_L of all associates he mentors, less the wages they are paid
- ▶ $\Pi_P = V_H + N(V_L - w_A)$

Mentoring associates

- ▶ Partners can be either highly-skilled, generating surplus V_H , or low-skilled, generating surplus V_L
- ▶ A partnership has M partners

- ▶ $\Pi_P = V_H + N (V_L - w_A)$

- Problem and model assumptions
- **Associates joining the partnership**
- Taking up partnership offers
- Not appointing unskilled partners
- Mentoring of associates
- Summary

Profits of joining a partnership

Profits of joining a partnership

- ▶ Associates do not know if they are highly skilled and chosen as partners

Profits of joining a partnership

- ▶ Associates do not know if they are highly skilled and chosen as partners, they assign probability $\frac{1}{N}$ to this

Profits of joining a partnership

- ▶ Associates do not know if they are highly skilled and chosen as partners, they assign probability $\frac{1}{N}$ to this
- ▶ If appointed as partner
- ▶ $\frac{1}{N}$

Profits of joining a partnership

- ▶ Associates do not know if they are highly skilled and chosen as partners, they assign probability $\frac{1}{N}$ to this
- ▶ If **appointed as partner**, they obtain their **initial wage**

- ▶ $\frac{1}{N} (w_A$

Profits of joining a partnership

- ▶ Associates do not know if they are highly skilled and chosen as partners, they assign probability $\frac{1}{N}$ to this
- ▶ If **appointed as partner**, they obtain their **initial wage** and in the **next time period** the **profits** of being a partner

- ▶ $\frac{1}{N} \left(w_A + \frac{\Pi_P}{\rho} \right)$

Profits of joining a partnership

- ▶ Associates do not know if they are highly skilled and chosen as partners, they assign probability $\frac{1}{N}$ to this
- ▶ If appointed as partner, they obtain their initial wage and in the next time period the profits of being a partner, less the mentoring costs

- ▶ $\frac{1}{N} \left(w_A + \frac{\Pi_P - C}{\rho} \right)$

Profits of joining a partnership

- ▶ Associates do not know if they are highly skilled and chosen as partners, they assign probability $\frac{1}{N}$ to this
- ▶ If appointed as partner, they obtain their initial wage and in the next time period the profits of being a partner, less the mentoring costs
- ▶ If **not appointed as partner**
- ▶ $\frac{1}{N} \left(w_A + \frac{\Pi_P - C}{\rho} \right) + \left(1 - \frac{1}{N} \right)$

Profits of joining a partnership

- ▶ Associates do not know if they are highly skilled and chosen as partners, they assign probability $\frac{1}{N}$ to this
- ▶ If appointed as partner, they obtain their initial wage and in the next time period the profits of being a partner, less the mentoring costs
- ▶ If **not appointed as partner**, they obtain their **initial wage**
- ▶ $\frac{1}{N} \left(w_A + \frac{\Pi_P - C}{\rho} \right) + \left(1 - \frac{1}{N} \right) \left(w_A \right)$

Profits of joining a partnership

- ▶ Associates do not know if they are highly skilled and chosen as partners, they assign probability $\frac{1}{N}$ to this
- ▶ If appointed as partner, they obtain their initial wage and in the next time period the profits of being a partner, less the mentoring costs
- ▶ If **not appointed as partner**, they obtain their **initial wage** and in the **next time period** gets paid his **contribution**
- ▶ $\frac{1}{N} \left(w_A + \frac{\Pi_P - C}{\rho} \right) + \left(1 - \frac{1}{N} \right) \left(w_A + \frac{V_L}{\rho} \right)$

Profits of joining a partnership

- ▶ Associates do not know if they are highly skilled and chosen as partners, they assign probability $\frac{1}{N}$ to this
- ▶ If appointed as partner, they obtain their initial wage and in the next time period the profits of being a partner, less the mentoring costs
- ▶ If not appointed as partner, they obtain their initial wage and in the next time period gets paid his contribution
- ▶
$$V_L + \frac{V_L}{\rho}$$
- ▶ If not joining the partnership, they obtain their **contribution** in the current and **next time period**

Profits of joining a partnership

- ▶ Associates do not know if they are highly skilled and chosen as partners, they assign probability $\frac{1}{N}$ to this
- ▶ If appointed as partner, they obtain their initial wage and in the next time period the profits of being a partner, less the mentoring costs
- ▶ If not appointed as partner, they obtain their initial wage and in the next time period gets paid his contribution
- ▶ $\frac{1}{N} \left(w_A + \frac{\Pi_P - C}{\rho} \right) + \left(1 - \frac{1}{N} \right) \left(w_A + \frac{V_L}{\rho} \right) \geq V_L + \frac{V_L}{\rho}$
- ▶ If not joining the partnership, they obtain their contribution in the current and next time period
- ▶ They **join** the partnership if this is more profitable

Profits of joining a partnership

- ▶ Associates do not know if they are highly skilled and chosen as partners, they assign probability $\frac{1}{N}$ to this
- ▶ If appointed as partner, they obtain their initial wage and in the next time period the profits of being a partner, less the mentoring costs
- ▶ If not appointed as partner, they obtain their initial wage and in the next time period gets paid his contribution
- ▶ $\frac{1}{N} \left(w_A + \frac{\Pi_P - C}{\rho} \right) + \left(1 - \frac{1}{N} \right) \left(w_A + \frac{V_L}{\rho} \right) \geq V_L + \frac{V_L}{\rho}$
- ▶ If not joining the partnership, they obtain their contribution in the current and next time period
- ▶ They join the partnership if this is more profitable

Decision to join

Decision to join

- ▶ Associates join the partnership if $w_A \geq V_L - \frac{(V_H - V_L) - C}{N(\rho - 1)}$

Decision to join

- ▶ Associates join the partnership if $w_A \geq V_L - \frac{(V_H - V_L) - C}{N(\rho - 1)}$
- ▶ If $C \leq C^* = V_H - V_L (1 + (\rho - 1) N)$, we can set $w_A = 0$

Decision to join

- ▶ Associates join the partnership if $w_A \geq V_L - \frac{(V_H - V_L) - C}{N(\rho - 1)}$
- ▶ If $C \leq C^* = V_H - V_L (1 + (\rho - 1) N)$, we can set $w_A = 0$
- ▶ If mentoring costs are not too high, the benefits from being a **future partner** are sufficiently high for associates to forego any remuneration

Decision to join

- ▶ Associates join the partnership if $w_A \geq V_L - \frac{(V_H - V_L) - C}{N(\rho - 1)}$
- ▶ If $C \leq C^* = V_H - V_L (1 + (\rho - 1) N)$, we can set $w_A = 0$
- ▶ If mentoring costs are not too high, the benefits from being a future partner are sufficiently high for associates to forego any remuneration
- ▶ This is feasible if $C^* \geq 0$

Decision to join

- ▶ Associates join the partnership if $w_A \geq V_L - \frac{(V_H - V_L) - C}{N(\rho - 1)}$
- ▶ If $C \leq C^* = V_H - V_L (1 + (\rho - 1) N)$, we can set $w_A = 0$
- ▶ If mentoring costs are not too high, the benefits from being a future partner are sufficiently high for associates to forego any remuneration
- ▶ This is feasible if $C^* \geq 0$, or $\frac{V_H}{V_L} \geq 1 + (\rho - 1) N$

Decision to join

- ▶ Associates join the partnership if $w_A \geq V_L - \frac{(V_H - V_L) - C}{N(\rho - 1)}$
- ▶ If $C \leq C^* = V_H - V_L (1 + (\rho - 1) N)$, we can set $w_A = 0$
- ▶ If mentoring costs are not too high, the benefits from being a future partner are sufficiently high for associates to forego any remuneration
- ▶ This is feasible if $C^* \geq 0$, or $\frac{V_H}{V_L} \geq 1 + (\rho - 1) N$
- ▶ The surplus generated by highly-skilled partners have to be **sufficiently high**

Decision to join

- ▶ Associates join the partnership if $w_A \geq V_L - \frac{(V_H - V_L) - C}{N(\rho - 1)}$
- ▶ If $C \leq C^* = V_H - V_L (1 + (\rho - 1) N)$, we can set $w_A = 0$
- ▶ If mentoring costs are not too high, the benefits from being a future partner are sufficiently high for associates to forego any remuneration
- ▶ This is feasible if $C^* \geq 0$, or $\frac{V_H}{V_L} \geq 1 + (\rho - 1) N$
- ▶ The surplus generated by highly-skilled partners have to be sufficiently high

- Problem and model assumptions
- Associates joining the partnership
- **Taking up partnership offers**
- Not appointing unskilled partners
- Mentoring of associates
- Summary

Value of partnership

Value of partnership

- ▶ Partners are paid wages w_P

Value of partnership

- ▶ Partners are paid wages w_P , reducing the **profits** of the partnership

Value of partnership

- ▶ Partners are paid wages w_P , reducing the profits of the partnership
- ▶ Associates are paid $w_A = 0$

Value of partnership

- ▶ Partners are paid wages w_P , reducing the profits of the partnership
- ▶ Associates are paid $w_A = 0$
- ▶ Profits of the partnership is then $\hat{\Pi}_B = \Pi_B - w_P = V_H + NV_L - w_P$

Value of partnership

- ▶ Partners are paid wages w_P , reducing the profits of the partnership
- ▶ Associates are paid $w_A = 0$
- ▶ Profits of the partnership is then $\hat{\Pi}_B = \Pi_B - w_P = V_H + NV_L - w_P$
- ▶ These profits accrue in **perpetuity**

Value of partnership

- ▶ Partners are paid wages w_P , reducing the profits of the partnership
- ▶ Associates are paid $w_A = 0$
- ▶ Profits of the partnership is then $\hat{\Pi}_B = \Pi_B - w_P = V_H + NV_L - w_P$
- ▶ These profits accrue in perpetuity, hence the value of the partnership is
$$P^* = \frac{V_H + NV_L - w_P}{\rho - 1}$$

Value of partnership

- ▶ Partners are paid wages w_P , reducing the profits of the partnership
- ▶ Associates are paid $w_A = 0$
- ▶ Profits of the partnership is then $\hat{\Pi}_B = \Pi_B - w_P = V_H + NV_L - w_P$
- ▶ These profits accrue in perpetuity, hence the value of the partnership is
$$P^* = \frac{V_H + NV_L - w_P}{\rho - 1}$$

Payment if partnership is refused

Payment if partnership is refused

- ▶ Associates **not** appointed partners join the job market

Payment if partnership is refused

- ▶ Associates not appointed partners join the job market, there will be $M(N - 1)$ unskilled associates generating V_L each

Payment if partnership is refused

- ▶ Associates not appointed partners join the job market, there will be $M(N - 1)$ unskilled associates generating V_L each
- ▶ If a highly-skilled associate **rejects** the partnership, he will generate V_H

Payment if partnership is refused

- ▶ Associates not appointed partners join the job market, there will be $M(N - 1)$ unskilled associates generating V_L each
- ▶ If a highly-skilled associate rejects the partnership, he will generate V_H and the number of former associates in the market is $M(N - 1) + 1$

Payment if partnership is refused

- ▶ Associates not appointed partners join the job market, there will be $M(N - 1)$ unskilled associates generating V_L each
- ▶ If a highly-skilled associate rejects the partnership, he will generate V_H and the number of former associates in the market is $M(N - 1) + 1$
- ▶ Average surplus is then $\frac{M(N-1)V_L + V_H}{M(N-1) + 1}$

Payment if partnership is refused

- ▶ Associates not appointed partners join the job market, there will be $M(N - 1)$ unskilled associates generating V_L each
- ▶ If a highly-skilled associate rejects the partnership, he will generate V_H and the number of former associates in the market is $M(N - 1) + 1$
- ▶ Average surplus is then $\frac{M(N-1)V_L + V_H}{M(N-1) + 1}$, former associates can earn this wage **outside** the partnership

Payment if partnership is refused

- ▶ Associates not appointed partners join the job market, there will be $M(N - 1)$ unskilled associates generating V_L each
- ▶ If a highly-skilled associate rejects the partnership, he will generate V_H and the number of former associates in the market is $M(N - 1) + 1$
- ▶ Average surplus is then $\frac{M(N-1)V_L + V_H}{M(N-1) + 1}$, former associates can earn this wage outside the partnership

Condition to accept a partnership

Condition to accept a partnership

- ▶ If joining the partnership they get $\Pi_P - C$

Condition to accept a partnership

- ▶ If joining the partnership they get $\Pi_P - C$
- ▶ Highly skilled associates join the partnership if

$$\Pi_P - C = V_H + NV_L - C \geq \frac{M(N-1)V_L + V_H}{M(N-1) + 1}$$

Condition to accept a partnership

- ▶ If joining the partnership they get $\Pi_P - C$
- ▶ Highly skilled associates join the partnership if
$$\Pi_P - C = V_H + NV_L - C \geq \frac{M(N-1)V_L + V_H}{M(N-1)+1}$$
- ▶ This requires $C \leq C^{**} = \frac{M(N-1)V_H + (M(N-1)^2 + 1)V_L}{M(N-1)+1}$

Condition to accept a partnership

- ▶ If joining the partnership they get $\Pi_P - C$
- ▶ Highly skilled associates join the partnership if
$$\Pi_P - C = V_H + NV_L - C \geq \frac{M(N-1)V_L + V_H}{M(N-1)+1}$$
- ▶ This requires $C \leq C^{**} = \frac{M(N-1)V_H + (M(N-1)^2 + 1)V_L}{M(N-1)+1}$
- ▶ If mentoring costs are **not too high**, accepting a partnership is optimal

Condition to accept a partnership

- ▶ If joining the partnership they get $\Pi_P - C$
- ▶ Highly skilled associates join the partnership if
$$\Pi_P - C = V_H + NV_L - C \geq \frac{M(N-1)V_L + V_H}{M(N-1)+1}$$
- ▶ This requires $C \leq C^{**} = \frac{M(N-1)V_H + (M(N-1)^2 + 1)V_L}{M(N-1)+1}$
- ▶ If mentoring costs are not too high, accepting a partnership is optimal

- Problem and model assumptions
- Associates joining the partnership
- Taking up partnership offers
- **Not appointing unskilled partners**
- Mentoring of associates
- Summary

Unskilled associate accepting the partnership

Unskilled associate accepting the partnership

- ▶ If an unskilled partner is appointed the investment bank loses reputation

Unskilled associate accepting the partnership

- ▶ If an unskilled partner is appointed the investment bank loses reputation and it **cannot** be sold

Unskilled associate accepting the partnership

- ▶ If an unskilled partner is appointed the investment bank loses reputation and it cannot be sold
- ▶ Unskilled partners will generate surplus V_L

V_L

Unskilled associate accepting the partnership

- ▶ If an unskilled partner is appointed the investment bank loses reputation and it cannot be sold
- ▶ Unskilled partners will generate surplus V_L and obtain surplus V_L from each associate

$$V_L + NV_L$$

Unskilled associate accepting the partnership

- ▶ If an unskilled partner is appointed the investment bank loses reputation and it cannot be sold
- ▶ Unskilled partners will generate surplus V_L and obtain surplus V_L from each associate and they have previously spent P to purchase the partnership

$$V_L + NV_L - \rho P$$

Unskilled associate accepting the partnership

- ▶ If an unskilled partner is appointed the investment bank loses reputation and it cannot be sold
- ▶ Unskilled partners will generate surplus V_L and obtain surplus V_L from each associate and they have previously spent P to purchase the partnership, which cannot be recovered

$$V_L + NV_L - \rho P$$

Unskilled associate accepting the partnership

- ▶ If an unskilled partner is appointed the investment bank loses reputation and it cannot be sold
- ▶ Unskilled partners will generate surplus V_L and obtain surplus V_L from each associate and they have previously spent P to purchase the partnership, which cannot be recovered
- ▶ If **not a partner**, the unskilled associate would obtain V_L

V_L

Unskilled associate accepting the partnership

- ▶ If an unskilled partner is appointed the investment bank loses reputation and it cannot be sold
- ▶ Unskilled partners will generate surplus V_L and obtain surplus V_L from each associate and they have previously spent P to purchase the partnership, which cannot be recovered
- ▶ If not a partner, the unskilled associate would obtain V_L
- ▶ Accept the partnership if $V_L + NV_L - \rho P \geq V_L$

Unskilled associate accepting the partnership

- ▶ If an unskilled partner is appointed the investment bank loses reputation and it cannot be sold
- ▶ Unskilled partners will generate surplus V_L and obtain surplus V_L from each associate and they have previously spent P to purchase the partnership, which cannot be recovered
- ▶ If not a partner, the unskilled associate would obtain V_L
- ▶ Accept the partnership if $V_L + NV_L - \rho P \geq V_L$
- ▶ This requires $P \leq P^{**} = \frac{NV_L}{\rho}$

Unskilled associate accepting the partnership

- ▶ If an unskilled partner is appointed the investment bank loses reputation and it cannot be sold
- ▶ Unskilled partners will generate surplus V_L and obtain surplus V_L from each associate and they have previously spent P to purchase the partnership, which cannot be recovered
- ▶ If not a partner, the unskilled associate would obtain V_L
- ▶ Accept the partnership if $V_L + NV_L - \rho P \geq V_L$
- ▶ This requires $P \leq P^{**} = \frac{NV_L}{\rho}$

Avoiding appointing unskilled partners

Avoiding appointing unskilled partners

- ▶ If no highly skilled associate is available, $M - 1$ partners remain

Avoiding appointing unskilled partners

- ▶ If no highly skilled associate is available, $M - 1$ partners remain, the total value of the partnership is then $(M - 1)P^*$

Avoiding appointing unskilled partners

- ▶ If no highly skilled associate is available, $M - 1$ partners remain, the total value of the partnership is then $(M - 1) P^*$
- ▶ If an unskilled associate is available, we retain M partners

Avoiding appointing unskilled partners

- ▶ If no highly skilled associate is available, $M - 1$ partners remain, the total value of the partnership is then $(M - 1) P^*$
- ▶ If an unskilled associate is available, we retain M partners, the total value if the partnership is MP^{**}

Avoiding appointing unskilled partners

- ▶ If no highly skilled associate is available, $M - 1$ partners remain, the total value of the partnership is then $(M - 1) P^*$
- ▶ If an unskilled associate is available, we retain M partners, the total value if the partnership is MP^{**}
- ▶ Unskilled associates are not appointed if $(M - 1) P^* \geq MP^{**}$

Avoiding appointing unskilled partners

- ▶ If no highly skilled associate is available, $M - 1$ partners remain, the total value of the partnership is then $(M - 1) P^*$
- ▶ If an unskilled associate is available, we retain M partners, the total value if the partnership is MP^{**}
- ▶ Unskilled associates are not appointed if $(M - 1) P^* \geq MP^{**}$
- ▶ This requires $w_P \leq w_P^* = V_H + \left(1 - \frac{\rho-1}{\rho} \frac{M}{M-1}\right) NV_L$

Avoiding appointing unskilled partners

- ▶ If no highly skilled associate is available, $M - 1$ partners remain, the total value of the partnership is then $(M - 1) P^*$
- ▶ If an unskilled associate is available, we retain M partners, the total value if the partnership is MP^{**}
- ▶ Unskilled associates are not appointed if $(M - 1) P^* \geq MP^{**}$
- ▶ This requires $w_P \leq w_P^* = V_H + \left(1 - \frac{\rho-1}{\rho} \frac{M}{M-1}\right) NV_L$
- ▶ For $w_P^* \geq 0$, we need $\frac{V_H}{V_L} \geq N \left(\frac{\rho-1}{\rho} \frac{M}{M-1} - 1\right)$

Avoiding appointing unskilled partners

- ▶ If no highly skilled associate is available, $M - 1$ partners remain, the total value of the partnership is then $(M - 1) P^*$
- ▶ If an unskilled associate is available, we retain M partners, the total value if the partnership is MP^{**}
- ▶ Unskilled associates are not appointed if $(M - 1) P^* \geq MP^{**}$
- ▶ This requires $w_P \leq w_P^* = V_H + \left(1 - \frac{\rho-1}{\rho} \frac{M}{M-1}\right) NV_L$
- ▶ For $w_P^* \geq 0$, we need $\frac{V_H}{V_L} \geq N \left(\frac{\rho-1}{\rho} \frac{M}{M-1} - 1\right)$
- ▶ The benefits generated by highly-skilled partners have to be **sufficiently high**

Avoiding appointing unskilled partners

- ▶ If no highly skilled associate is available, $M - 1$ partners remain, the total value of the partnership is then $(M - 1) P^*$
- ▶ If an unskilled associate is available, we retain M partners, the total value if the partnership is MP^{**}
- ▶ Unskilled associates are not appointed if $(M - 1) P^* \geq MP^{**}$
- ▶ This requires $w_P \leq w_P^* = V_H + \left(1 - \frac{\rho-1}{\rho} \frac{M}{M-1}\right) NV_L$
- ▶ For $w_P^* \geq 0$, we need $\frac{V_H}{V_L} \geq N \left(\frac{\rho-1}{\rho} \frac{M}{M-1} - 1\right)$
- ▶ The benefits generated by highly-skilled partners have to be sufficiently high

- Problem and model assumptions
- Associates joining the partnership
- Taking up partnership offers
- Not appointing unskilled partners
- Mentoring of associates**
- Summary

Not appointing new partners

Not appointing new partners

- ▶ Partners must have incentives to **mentor** associates

Not appointing new partners

- ▶ Partners must have incentives to mentor associates
- ▶ If a partner does **not mentor** and does **not appoint** an unskilled associate, there are only $M - 1$ partners left

Not appointing new partners

- ▶ Partners must have incentives to mentor associates
- ▶ If a partner does not mentor and does not appoint an unskilled associate, there are only $M - 1$ partners left
- ▶ These $M - 1$ partners generate future profits, but this is **shared by M partners**

Not appointing new partners

- ▶ Partners must have incentives to mentor associates
- ▶ If a partner does not mentor and does not appoint an unskilled associate, there are only $M - 1$ partners left
- ▶ These $M - 1$ partners generate future profits, but this is shared by M partners, the value becomes $\frac{M-1}{M} P^*$

Not appointing new partners

- ▶ Partners must have incentives to mentor associates
- ▶ If a partner does not mentor and does not appoint an unskilled associate, there are only $M - 1$ partners left
- ▶ These $M - 1$ partners generate future profits, but this is shared by M partners, the value becomes $\frac{M-1}{M}P^*$
- ▶ If mentoring associates, the value of the partnership is P^*

Not appointing new partners

- ▶ Partners must have incentives to mentor associates
- ▶ If a partner does not mentor and does not appoint an unskilled associate, there are only $M - 1$ partners left
- ▶ These $M - 1$ partners generate future profits, but this is shared by M partners, the value becomes $\frac{M-1}{M}P^*$
- ▶ If mentoring associates, the value of the partnership is P^* and the partner faces costs C

Not appointing new partners

- ▶ Partners must have incentives to mentor associates
- ▶ If a partner does not mentor and does not appoint an unskilled associate, there are only $M - 1$ partners left
- ▶ These $M - 1$ partners generate future profits, but this is shared by M partners, the value becomes $\frac{M-1}{M}P^*$
- ▶ If mentoring associates, the value of the partnership is P^* and the partner faces costs C , he receives $P^* - C$

Not appointing new partners

- ▶ If a partner does not mentor and does not appoint an unskilled associate, there are only $M - 1$ partners left
- ▶ These $M - 1$ partners generate future profits, but this is shared by M partners, the value becomes $\frac{M-1}{M}P^*$
- ▶ If mentoring associates, the value of the partnership is P^* and the partner faces costs C , he receives $P^* - C$

Conditions to mentor associates

Conditions to mentor associates

- ▶ A partner will mentor if $P^* - C \geq \frac{M-1}{M} P^*$

Conditions to mentor associates

- ▶ A partner will mentor if $P^* - C \geq \frac{M-1}{M} P^*$
- ▶ This requires $C \leq C^{***} = \frac{V_H + NV_L - w_P}{M(\rho-1)}$

Conditions to mentor associates

- ▶ A partner will mentor if $P^* - C \geq \frac{M-1}{M} P^*$
- ▶ This requires $C \leq C^{***} = \frac{V_H + NV_L - w_P}{M(\rho-1)}$
- ▶ If we set $w_P = 0$ this is **least** restrictive

Conditions to mentor associates

- ▶ A partner will mentor if $P^* - C \geq \frac{M-1}{M} P^*$
- ▶ This requires $C \leq C^{***} = \frac{V_H + NV_L - w_P}{M(\rho-1)}$
- ▶ If we set $w_P = 0$ this is least restrictive
- ▶ If mentoring costs are sufficiently **low**, partners are mentoring associates

Conditions to mentor associates

- ▶ A partner will mentor if $P^* - C \geq \frac{M-1}{M} P^*$
- ▶ This requires $C \leq C^{***} = \frac{V_H + NV_L - w_P}{M(\rho-1)}$
- ▶ If we set $w_P = 0$ this is least restrictive
- ▶ If mentoring costs are sufficiently low, partners are mentoring associates

Conditions for partnerships to exist

Conditions for partnerships to exist

$$\blacktriangleright C \leq C^* = V_H - V_L (1 + (\rho - 1) N)$$

Conditions for partnerships to exist

$$\blacktriangleright C \leq C^* = V_H - V_L (1 + (\rho - 1) N)$$

$$C \leq C^{**} = \frac{M(N-1)V_H + (M(N-1)^2 + 1)V_L}{M(N-1) + 1}$$

Conditions for partnerships to exist

$$\frac{V_H}{V_L} \geq N \left(\frac{\rho - 1}{\rho} \frac{M}{M - 1} - 1 \right)$$

- ▶ Mentoring costs must be sufficiently low
- ▶ Surplus of highly-skilled partners must be sufficiently high

- Problem and model assumptions
- Associates joining the partnership
- Taking up partnership offers
- Not appointing unskilled partners
- Mentoring of associates
- **Summary**

Remuneration differentials with partnerships

Remuneration differentials with partnerships

- ▶ Partnerships are viable if the **cost of mentoring** associates is not too high

Remuneration differentials with partnerships

- ▶ Partnerships are viable if the cost of mentoring associates is not too high and the **differential** between high-skilled and low-skilled associates is sufficiently high

Remuneration differentials with partnerships

- ▶ Partnerships are viable if the cost of mentoring associates is not too high and the differential between high-skilled and low-skilled associates is sufficiently high
- ▶ Associates accept low wages as the **prospect of future income** as a partner compensates them

Remuneration differentials with partnerships

- ▶ Partnerships are viable if the cost of mentoring associates is not too high and the differential between high-skilled and low-skilled associates is sufficiently high
- ▶ Associates accept low wages as the prospect of future income as a partner compensates them
- ▶ This leads to large **income discrepancies** within partnerships

Remuneration differentials with partnerships

- ▶ Partnerships are viable if the cost of mentoring associates is not too high and the differential between high-skilled and low-skilled associates is sufficiently high
- ▶ Associates accept low wages as the prospect of future income as a partner compensates them
- ▶ This leads to large income discrepancies within partnerships

Demise of partnerships

Demise of partnerships

- ▶ The demands on partners have **increased** over time

Demise of partnerships

- ▶ The demands on partners have increased over time, more involvement in **client work** left less time for mentoring

Demise of partnerships

- ▶ The demands on partners have increased over time, more involvement in client work left less time for mentoring
- ▶ The **size of partnerships** had to increase as business expanded

Demise of partnerships

- ▶ The demands on partners have increased over time, more involvement in client work left less time for mentoring
- ▶ The size of partnerships had to increase as business expanded, making identifying suitable associates **more difficult**

Demise of partnerships

- ▶ The demands on partners have increased over time, more involvement in client work left less time for mentoring
- ▶ The size of partnerships had to increase as business expanded, making identifying suitable associates more difficult
- ▶ The costs of mentoring in terms of **lost opportunities** for business became too high

Demise of partnerships

- ▶ The demands on partners have increased over time, more involvement in client work left less time for mentoring
- ▶ The size of partnerships had to increase as business expanded, making identifying suitable associates more difficult
- ▶ The costs of mentoring in terms of lost opportunities for business became too high and partnerships became **unviable**

Demise of partnerships

- ▶ The demands on partners have increased over time, more involvement in client work left less time for mentoring
- ▶ The size of partnerships had to increase as business expanded, making identifying suitable associates more difficult
- ▶ The costs of mentoring in terms of lost opportunities for business became too high and partnerships became unviable
- ▶ Low pay as associate makes joining partnerships **less attractive** as other investment banks offer higher salaries to attract highly-skilled associates

Demise of partnerships

- ▶ The demands on partners have increased over time, more involvement in client work left less time for mentoring
- ▶ The size of partnerships had to increase as business expanded, making identifying suitable associates more difficult
- ▶ The costs of mentoring in terms of lost opportunities for business became too high and partnerships became unviable
- ▶ Low pay as associate makes joining partnerships less attractive as other investment banks offer higher salaries to attract highly-skilled associates
